Standard Chartered Bank is headquartered in London where it is authorised by the UK's Prudential Regulation Authority (PRA), and Standard Chartered PLC Group and Standard Chartered Bank are regulated by the Financial Conduct Authority (FCA) and the PRA. Within this document 'the Group' refers to Standard Chartered PLC together with its subsidiary undertakings. Unless the context requires, within this document, 'China' refers to the People's Republic of China and, for the purposes of this document only, excludes Hong Kong Special Administrative Region (Hong Kong), Macau Special Administrative Region (Macau) and Taiwan. 'Korea' or 'South Korea' refers to the Republic of Korea. Greater China & North Asia (GCNA) includes China, Hong Kong, Japan, Korea, Macau and Taiwan; ASEAN & South Asia (ASA) includes Australia, Bangladesh, Brunei, Cambodia, India, Indonesia, Laos, Malaysia, Myanmar, Nepal, Philippines, Singapore, Sri Lanka, Thailand and Vietnam; and Africa & Middle East (AME) includes Bahrain, Egypt, Iraq, Jordan, Lebanon, Oman, Pakistan, Qatar, Saudi Arabia and the United Arab Emirates (UAE). Throughout this document unless specified the disclosures are at Group level. Throughout this document, unless another currency is specified, the word 'dollar' or symbol \$ means United States dollar. Throughout this document IRB refers to internal ratings based models. The Group does not use the Foundation IRB approach..

# 1. Introduction

## 1.1 Purpose and basis of preparation

The Pillar 3 Disclosures comprise detailed information on the underlying drivers of risk-weighted assets (RWA), capital, leverage and liquidity ratios as at 31 December 2019 in accordance with the European Union's (EU) Capital Requirements Regulation (CRR) and the Prudential Regulation Authority's (PRA) Rulebook.

The disclosures have been prepared in line with the disclosure templates introduced by the European Banking Authority's (EBA) guidelines on disclosure requirements (EBA/GL/2016/11) published in December 2016.

This report presents the annual Pillar 3 disclosures of Standard Chartered PLC ('the Group') as at 31 December 2019 and should be read in conjunction with the Group's Annual Report and Accounts.

The information presented in this Pillar 3 report is not required to be, and has not been, subjected to external audit.

## 1.2 Highlights

→ The Group's capital and leverage position is managed within the Board-approved risk appetite. The Group is well capitalised with low leverage and high levels of loss-absorbing capacity

→ The Group is well capitalised with a Common Equity Tier 1 (CET1) ratio of 13.8 per cent, well ahead of the current requirement of 10.2 per cent

→ The Group is not highly leveraged and its leverage ratio of 5.2 per cent is well ahead of the current leverage requirement of 3.7 per cent

→ The Group continues to manage its balance sheet proactively, with a particular focus on the efficient management of RWA

Common Equity Tier 1 (CET1) as if IFRS 9 or analogous ECLs transitional arrangements had not been applied	36,154	36,027	36,152	36,825	36,315
Tier 1	43,677	43,539	43,123	43,796	43,401
Tier 1 as if IFRS 9 or analogous ECLs transitional arrangements had not been applied	43,318	43,180	42,764	43,437	42,999
Total capital	55,965	54,940	54,957	55,862	55,696
Total capital as IFRS 9 or analogous ECLs transitional arrangements had not been applied	55,606	54,581	54,598	55,503	55,294
<b>Risk-weighted assets amounts</b>					
Total risk-weighted assets (RWA)	264,090	268,668	270,739	268,206	258,297
Total risk-weighted assets if IFRS 9 or analogous ECLs transitional arrangements had not been applied	264,220	268,798	270,869	268,336	258,442
<b>Risk-based capital ratios as a percentage of RWA</b>					
Common Equity Tier 1 ratio	13.8%	13.5%	13.5%	13.9%	14.2%
Common Equity Tier 1 ratio as if IFRS 9 or analogous ECLs transitional arrangements had not been applied	13.7%	13.4%	13.3%	13.7%	14.1%
Tier 1 ratio	16.5%	16.2%	15.9%	16.3%	16.8%
Tier 1 ratio as if IFRS 9 or analogous ECLs transitional arrangements had not been applied	16.4%	16.1%	15.8%	16.2%	16.6%
Total capital ratio	21.2%	20.4%	20.3%	20.8%	21.6%
Total capital ratio as if IFRS 9 or analogous ECLs transitional arrangements had not been applied	21.1%	20.3%	20.2%	20.7%	21.4%
<b>Additional CET1 buffer requirements as a percentage of RWA</b>					
Capital conservation buffer requirement (2.5% from 2019)	2.50%	2.50%	2.50%	2.50%	1.88%
Countercyclical buffer requirement	0.35%	0.41%	0.40%	0.36%	0.28%
Bank G-SIB and/or D-SIB additional requirements	1.00%	1.00%	1.00%	1.00%	0.75%
Total of bank CET1 specific buffer requirements	3.85%	3.91%	3.90%	3.86%	2.91%
CET1 available after meeting the bank's minimum capital requirements	7.43%	7.15%	7.40%	7.70%	8.10%
Total CET1 requirement <sup>1</sup>	10.24%	10.0%	10.0%	10.0%	9.0%
<b>UK leverage ratio</b>					
Total UK leverage ratio exposure measure	801,252	814,810	781,640	780,957	740,602
UK leverage ratio	5.2%	5.1%	5.3%	5.4%	5.6%
UK leverage ratio as if IFRS 9 or analogous ECLs transitional arrangements had not been applied	5.2%	5.1%	5.3%	5.3%	5.6%
<b>Liquidity Coverage Ratio</b>					
Total HQLA	151,901	150,927	149,915	149,411	146,470
Total net cash outflow	107,632	102,518	98,316	95,748	94,011
LCR ratio <sup>2</sup>	141.3%	147.5%	152.9%	156.3%	156.0%

<sup>1</sup> Includes a Pillar 2A CET1 requirement of around 1.9 per cent being 56 per cent of the total Pillar 2A requirement. The Group's current Pillar 2A requirement increased in 2019 to 3.38 per cent of RWA. This requirement can vary over time

<sup>2</sup> LCR ratio represents a rolling 12 month average LCR. The spot LCR as at 31 December 2019 was 143.7 per cent

Standard Chartered applies the transitional arrangements to accounting provisions recognised after 1 January 2018 under IFRS 9, as permitted by Regulation (EU) 2017/2395 of the European Parliament and of the Council, including paragraph 4 of that regulation that introduces the transitional arrangement.

Under this approach, the balance of expected credit loss (ECL) provisions in excess of the regulatory defined expected loss (EL) and additional ECL on standardised portfolios, net of related tax, are phased into the CET1 capital base over five years. The proportion phased in for the balance at each reporting period is 2019, 15 per cent; 2020, 30 per cent; 2021, 50 per cent; and 2022, 75 per cent. From 2023 onwards there is no transitional relief.

The application of the transitional relief results in a negligible effect on the CET1 ratio as the capital impact of ECL on the standardised portfolio, net of tax, has been largely offset. As there is no capital impact from additional provisions on advanced IRB portfolios, the related deferred tax asset continues to be recognised in full in CET1.

Table 2 shows information about the Group's total loss-absorbing capacity (TLAC) available, and TLAC requirements, applied at the resolution group level under a Single Point of Entry resolution strategy.

**Table 2: Key metrics – TLAC requirements (KM2)**

	31.12.19 \$million	30.09.19 \$million	30.06.19 \$million
<b>Resolution group</b>			
Total loss-absorbing capacity (TLAC) available	<b>75,649</b>	74,359	70,856
Fully loaded ECL accounting model TLAC available	<b>75,290</b>	74,000	70,497
Total RWA at the level of the resolution group	<b>264,090</b>	268,668	270,739
TLAC as a percentage of RWA	<b>28.6%</b>	27.7%	26.2%
Fully loaded ECL accounting model TLAC as a percentage of fully loaded ECL accounting model RWA (%)	<b>28.5%</b>	27.5%	26.0%
UK Leverage ratio exposure measure at the level of the resolution group	<b>801,252</b>	814,810	781,640
TLAC as a percentage of UK Leverage exposure measure	<b>9.4%</b>	9.1%	9.1%
Fully loaded ECL accounting model TLAC as a percentage of fully loaded ECL accounting model UK Leverage exposure measure	<b>9.4%</b>	9.1%	9.0%
Does the subordination exemption in the antepenultimate paragraph of Section 11 of the FSB TLAC Term Sheet apply?	<b>Yes</b>	Yes	Yes
Does the subordination exemption in the penultimate paragraph of Section 11 of the FSB TLAC Term Sheet apply?	<b>No</b>	No	No
If the capped subordination exemption applies, the amount of funding issued that ranks pari passu with Excluded Liabilities and that is recognised as external TLAC, divided by funding issued that ranks pari passu with Excluded Liabilities and that would be recognised as external TLAC if no cap was applied (%)	<b>N/A</b>	N/A	N/A

### 1.3 Regulatory disclosure framework

The Group complies with the Basel III framework as implemented in the United Kingdom. The Basel III framework is built on the three pillars of the Basel II framework.

Pillar 1: Sets the minimum capital requirements for credit risk, market risk and operational risk

Pillar 2: Considers through the Supervisory Review and Evaluation Process whether further capital is required in addition to Pillar 1 calculations

Pillar 3: Aims to provide a consistent and comprehensive disclosure framework that enhances comparability between banks and further promotes improvements in risk management. Pillar 3 requires all material risks to be disclosed, enabling a comprehensive view of the bank's risk profile.

The Pillar 3 Disclosures 2019 comprise all information required to be included in the UK and are prepared at the Group consolidated level. Where disclosure has been withheld as proprietary or non-material, as permitted by the rules, appropriate comment has been included. It is the Group's intention that the Pillar 3 Disclosures be viewed as an integral, albeit separately reported, element of the Annual Report and Accounts. The Group considers a number of factors in determining where disclosure is made between the Annual Report and Accounts and Pillar 3, including International Financial Reporting Standards (IFRS), regulatory requirements and industry best practice. Pages 132 to 133 of this document provide a summary of differences and cross references between the Annual Report and Accounts and the Pillar 3 Disclosures.

### Remuneration

The qualitative and quantitative Pillar 3 remuneration disclosures for the 2019 performance year are set out on pages 108 to 137 of the Directors' remuneration report in the 2019 Annual Report and Accounts. Information is provided on the key components of our remuneration approach and how we develop our approach. The disclosures follow the requirements set out in Part 8 of the CRR and the Basel Committee on Banking Supervision (BCBS) standards issued in March 2017.

### G-SIB

The Group has been identified as a Global Systemically Important Bank (G-SIB) by the Financial Stability Board (FSB) since November 2012. The Group's score from the BCBS's methodology for assessing and identifying G-SIBs has resulted in an additional loss-absorbency requirement of 1 per cent of CET1. The EU's Capital Requirements Directive (CRD IV) mandates the Group to publicly disclose the value of its Global Systemically Important Institution (G-SII) indicators on an annual basis. The terms 'G-SIB' and 'G-SII' are interchangeable – 'G-SIB' is used by the FSB and Basel Committee, whereas CRD IV refers to 'G-SII'. The Standard Chartered PLC 2018 G-SII disclosure is published on: <https://www.sc.com/en/investors/financial-results>.

### Frequency

In accordance with Group policy, the Pillar 3 Disclosures are made quarterly as at 31 March, 30 June, 30 September and 31 December in line with the EBA guidelines on materiality, proprietary and confidentiality and on disclosure frequency, and the Guidelines on disclosure requirements (EBA/GL/2014/14 and EBA/GL/2016/11). Disclosures are published on the Standard Chartered PLC website aligning with the publication date of the Group's Interim, Half Year and Annual Report and Accounts.

### Verification

Whilst the Pillar 3 Disclosures 2019 are not required to be externally audited, the document has been verified internally in accordance with the Group's policies on disclosure and its financial reporting and governance processes. Controls comparable to those for the 2019 Annual Report and Accounts have been applied to confirm compliance with PRA regulations.

→ Items excluded on the grounds of materiality:

- Quantitative disclosures of specialised lending exposures where the simple risk-weight approach is used, non-deducted participations in insurance undertakings, composition of collateral for exposures to derivatives and securities financing transactions, off-balance sheet collateral received, effect on the RWAs of credit derivatives used as CRM techniques and Collateral obtained by taking possession and execution processes
- Qualitative and quantitative disclosures on exposures to equities not included in the trading book

## 1.4 Risk management

The management of risk is a key component of the Group's business. One of the main risks we incur arises from extending credit to customers through our trading and lending operations. Beyond credit risk, we are also exposed to a range of other risk types such as country, traded, capital and liquidity, operational, reputational, compliance, conduct, information and cyber security and financial crime risks that are inherent in our strategy, product range and geographical coverage.

In the Risk management approach section of the 2019 Annual Report and Accounts we describe our approach and strategy for managing risk. We discuss our risk management practices, monitoring and mitigation, and governance in relation to our main activities and significant risks.

The Group is exposed to 10 key risks:

- Credit risk (refer to section Credit risk in pages 212 to 214 of the 2019 Annual Report and Accounts)
- Country risk (refer to section Country risk on page 219 of the 2019 Annual Report and Accounts)
- Traded risk (refer to section Traded risk on pages 215 to 216 of the 2019 Annual Report and Accounts)
- Capital and liquidity risk (refer to section Capital and liquidity risk on pages 217 to 218 of the 2019 Annual Report and Accounts)
- Operational risk (refer to section Operational risk on page 221 of the 2019 Annual Report and Accounts)
- Reputational risk (refer to section Reputational risk on page 220 of the 2019 Annual Report and Accounts)
- Compliance risk (refer to section Compliance risk on page 222 of the 2019 Annual Report and Accounts)
- Conduct risk (refer to section Conduct risk on pages 223 to 224 of the 2019 Annual Report and Accounts)
- Information and cyber security risk (refer to section Information and cyber security risk on pages 226 to 227 of the 2019 Annual Report and Accounts)
- Financial crime risk (refer to section Financial crime risk on page 225 of the 2019 Annual Report and Accounts)

### Credit Risk

Credit risk is the potential for loss due to the failure of a counterparty to meet its obligations to pay the Group. Credit exposures arise from both the banking and trading books.

Credit risk is managed through a framework that sets out policies and procedures covering the measurement and management of credit risk. The Credit Risk Function, as a second line control function, performs independent challenge, monitoring and oversight of the credit risk management practices of the Business and Functions engaged in or supporting revenue generating activities which constitute the First Line of defence. Risk appetite is defined by the Group and approved by the Board. It is the maximum amount and type of risk that the Group is willing to assume in pursuit of its strategies. Credit exposure limits are approved within a defined credit approval authority framework.

The Group manages its credit exposures following the principle of diversification across products, geographies, client segments and industry sectors.

The Group uses the Advanced Internal Ratings Based (IRB) approach to calculate credit risk capital requirements with the approval of our relevant regulators. This approach builds on the Group's risk management practices and is the result of a continuing investment in data warehouses and risk models.

For portfolios where the Group does not have IRB approval, or where the exposures are permanently exempt from the IRB approach, the Standardised Approach (SA) is used.

Refer to Credit Risk (pages 212 to 214) in the 2019 Annual Report and Accounts where we describe the main components of credit risk management, including our credit risk profile, credit risk measurement and policies set in line with risk appetite. For the scope and main content of reporting to senior management, refer to page 212 in the 2019 Annual Report and Accounts.

### Traded Risk

Traded Risk is the potential for loss resulting from activities undertaken by the bank in financial markets. This includes market risk, counterparty credit risk and other risk sub-types.

Market risk is the potential for loss of economic value due to adverse changes in financial market rates or prices. The Group's exposure to market risk arises predominantly from these sources:

- Trading book:
  - The Group provides clients access to financial markets, facilitation of which entails the Group taking moderate market risk positions. All trading teams support client activity; there are no proprietary trading teams. Hence, income earned from market risk-related activities is primarily driven by the volume of client activity rather than risk-taking

→ Non-trading book:

- The Treasury Markets desk is required to hold a liquid assets buffer, much of which is held in high-quality marketable debt securities
- The Group has capital invested and related income streams denominated in currencies other than US dollars. To the extent that these are not hedged, the Group is subject to structural foreign exchange risk which is reflected in reserves

The primary categories of market risk for the Group are interest rate risk, foreign exchange rate risk and commodity risk.

We use a value at risk (VaR) model for the measurement of the market risk capital requirements for part of the trading book exposures where permission to use such models has been granted by the PRA. Where our market risk exposures are not approved for inclusion in VaR models, the capital requirements are determined using the standard rules set by the regulatory framework.

Counterparty credit risk is the risk that a counterparty defaults before satisfying its obligations under a derivative, a securities financing transaction (SFT) or a similar contract.

Refer to Traded risk 215 to 216 in the 2019 Annual Report and Accounts where we describe the main components of traded risk management, including our traded risk profile.

### Operational Risk

We define operational risk as the potential for loss resulting from inadequate or failed internal processes, and systems, human error, or from the impact of external events (including legal risk). Non-financial risks are managed through the Control Assessment Standards which are used to determine the design strength and reliability of the Group's processes. The Group aims to control operational risks to ensure that operational losses (financial or reputational), do not cause material damage to the Group's franchise. The Group applies the Standardised Approach for measuring the capital requirements for operational risk. For risk-weighted assets and capital requirements resultant from operational risk, refer to table 20 on page 21 and to pages 239 of the 2019 Annual Report and Accounts.

## 1.5 Enhancements and future developments of Pillar 3

The Basel Committee on Banking Supervision (BCBS), EU and UK authorities release Pillar 3 disclosure standards and guidelines. We refine our disclosures to meet the requirements under the regulatory and accounting standards as they evolve.

In January 2015, the BCBS issued the requirements for the first phase of the Committee's review of the Pillar 3 disclosure framework. The focus of the first phase was on disclosure requirements in the areas of credit, market, counterparty credit, equity and securitisation risks. The revised BCBS Pillar 3 framework has been implemented in the EU by Guidelines issued by the European Banking Authority (EBA) that were finalised in December 2016 and have come into effect from 31 December 2017.

In March 2017, the BCBS issued the final standard for the second phase of its review of the Pillar 3 disclosure framework. The standard consolidates existing Basel Committee disclosure requirements into the Pillar 3 framework, covering the composition of capital and Total loss-absorbing capacity (TLAC), the leverage ratio, the liquidity ratios, the indicators for determining global systemically important banks, the countercyclical capital buffer, interest rate risk

in the banking book and remuneration. The disclosure requirements as set out in the standard have been phased in from year-end 2017. The 2019 year-end disclosure document incorporates some of these templates, although the additional disclosure requirements arising from the March 2017 BCBS standard have yet to be implemented in the EU.

In December 2018, the Basel Committee published the finalised standard for the third phase of its Pillar 3 review which covers disclosure requirements resulting from the finalisation of the regulatory framework, including credit risk, operational risk, the leverage ratio and credit valuation adjustment (CVA) risk, risk-weighted assets (RWA) as calculated by internal models and according to the standardised approaches; and an overview of risk management, RWA and key prudential metrics. The disclosure requirements as set out in the standard have been phased in from year-end 2020.

Also in December 2018, the EBA issued guidelines on the disclosure of non-performing and forbore exposures that came into effect from 31 December 2019. Our 2019 year-end Pillar 3 disclosures incorporate these new templates but do not reflect any of the additional requirements arising from the December 2018 BCBS standard.

## 1.6 Accounting and regulatory consolidation

The Pillar 3 Disclosures are prepared at the Group consolidated level. The accounting policy for financial consolidation is provided in the notes to the financial statements in the 2019 Annual Report and Accounts. All banking subsidiaries are fully consolidated for both regulatory and accounting purposes. For associates and joint ventures, the regulatory treatment may differ from the accounting policy, which applies the equity accounting method.

The regulatory consolidation approaches used by the Group are shown in the following table, which identifies the principal undertakings, including investments, associates and joint ventures, which are all principally engaged in the business of banking and provision of other financial services.

The primary difference between financial consolidation and regulatory consolidation is PT Bank Permata Tbk, which is equity accounted for financial and fully consolidated for regulatory purposes. PT Bank Permata Tbk's Annual Report and Accounts in compliance with their local regulations is published on their website.

<https://www.permatabank.com/en/tentang-kami/hubungan-investor>

**Table 3: Regulatory consolidation**

Type	Description	Regulatory consolidation	Principal undertakings within each category
<b>Investment (non significant)</b>	The Group holds no more than 10 per cent of the issued share capital	The Group risk-weights the investment subject to the CRD IV threshold calculation	-
<b>Associate</b>	The Group holds more than 10 per cent and less than 20 per cent of the issued share capital	The Group risk-weights the investment subject to the CRD IV threshold calculation	China Bohai Bank
<b>Joint Venture</b>	The Group enters into a contractual arrangement to exercise joint control over an undertaking	Where the Group's liability to the joint venture is greater than the capital held, full consolidation is undertaken. Otherwise joint ventures are proportionately consolidated	PT Bank Permata Tbk
<b>Subsidiary</b>	The Group holds more than 50 per cent of the issued share capital of a financial entity	The Group fully consolidates the undertaking	Standard Chartered Bank Standard Chartered Bank Korea Limited Standard Chartered Bank Malaysia Berhad Standard Chartered Bank (Pakistan) Limited Standard Chartered Bank (Taiwan) Limited Standard Chartered Bank (Hong Kong) Limited Standard Chartered Bank (China) Limited Standard Chartered Bank (Singapore) Limited Standard Chartered Bank (Thai) Public Company Limited Standard Chartered Bank Nigeria Limited Standard Chartered Bank Kenya Limited Standard Chartered Private Equity Managers (Hong Kong) Limited
<b>Excluded entities</b>	Insurance or industrial entities excluded from the scope of banking prudential consolidation	The Group risk-weights the investment subject to the CRD IV threshold calculation	Standard Chartered Assurance Ltd Standard Chartered Insurance Ltd

**Table 4: Outline of the differences in the scopes of consolidation (LI3)**

Name of the entity	Description of the entity	Method of accounting consolidation	2019			
			Method of regulatory consolidation			
			Full consolidation	Proportional consolidation	Neither consolidated nor deducted	Deducted
PT Bank Permata Tbk	Joint venture credit institution	Equity accounting	√			
Standard Chartered Assurance Ltd	Insurance entity	Full consolidation			√	
Standard Chartered Insurance Ltd	Insurance entity	Full consolidation			√	

### 1.7 Significant subsidiaries

CRR Article 13 requires the application of disclosure requirements to significant subsidiaries of EU parent institutions and subsidiaries which are of material significance to their local market.

Standard Chartered Bank is the main operating subsidiary of the Group. The Group has two other significant subsidiaries,

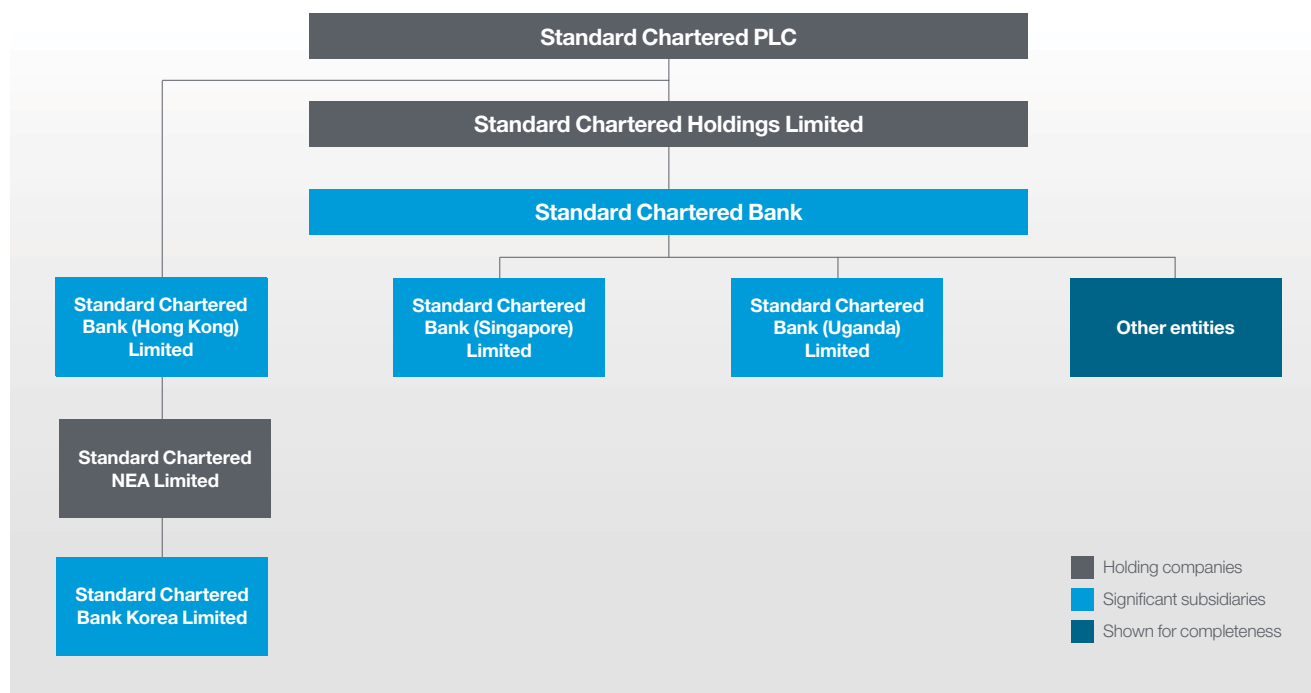

Standard Chartered Bank (Hong Kong) Limited (regulated by the Hong Kong Monetary Authority) and Standard Chartered Bank Korea Limited (regulated by the Financial Supervisory Service (FSS) in Korea). Standard Chartered Bank Singapore

Limited (regulated by the Monetary Authority of Singapore) and Standard Chartered Bank Uganda Limited (regulated by the Bank of Uganda) are subsidiaries that are of material

significance to their local market. Standard Chartered Bank (Hong Kong) Limited and Standard Chartered Bank Korea Limited disclose separate Pillar 3 reports in compliance with their local regulations. Annex 1 provides a summary of the disclosure for the significant subsidiaries.

The chart below represents a simplified regulatory structure of the Group, including the subsidiaries covered by CRR Article 13e.

#### Simplified structure of the Group

### 1.8 Comparison of accounting balance sheet and exposure at default

The differences between the financial and prudential consolidated balance sheets arise primarily from differences in the basis of consolidation and the requirement to fully consolidate for prudential purposes PT Bank Permata Tbk, a joint venture credit institution

which is equity accounted for financial purposes. The more significant difference between the two basis is the treatment of capital, which is presented in Table 8 based on the group regulatory balance sheet and not the financial accounting balance sheet.

Table 5 splits the regulatory balance sheet measured under IFRS into each regulatory risk category. The regulatory risk category drives the approach applied in the calculation of regulatory exposures and RWA.

<sup>1</sup> 2018 has been represented to align asset and liability classifications to the row structure of the balance sheet used in the latest financial statements

Table 6 shows the effect of regulatory adjustments required to derive the Group's exposure at default (EAD) for the purposes of calculating its credit risk capital requirements. The differences between the carrying values under regulatory scope of consolidation and amounts considered for regulatory purposes shown in Table 6 are mainly due to derivatives netting benefits, provisions, collateral and

off-balance sheet exposures. The total EAD for credit and counterparty credit risk is further split by geography, industry and maturity in Tables 41 to 43; standardised credit risk before and after the effect of CRM is presented in Table 67; standardised credit and counterparty credit risk by risk weight is presented in Tables 68 to 69 and IRB credit and counterparty credit risk before and after

the effect of Credit Risk Mitigation (CRM) is presented in Table 54. Information on the standardised and IRB counterparty credit risk exposures can be found in section 4.2. Further detail on the EAD under the securitisation framework can be found in Table 70.

1 Regulatory balance sheet primarily includes full consolidation of PT Bank Permata Tbk a joint venture (JV)

2 Reflects the effect of master netting agreements in addition to the netting permitted under International Accounting Standard (IAS) 32 requirement

3 2018 Differences due to consideration of provisions and Regulatory exposure at default pre credit risk mitigation have been restated to reflect the change in accounting treatment of interest in suspense. Note 1 of the Notes to financial statements sets out the basis for this change on page 263 in the 2019 Annual Report and Accounts.

The CRR provisions on prudential valuation require banks to quantify several valuation uncertainties pertaining to the valuation of assets and liabilities recorded at fair value for accounting purposes. The amounts by which the resulting Prudent Valuation Adjustments (PVA) exceed any associated Fair Value Adjustments are referred to as the Additional Valuation Adjustments (AVAs) and their aggregate is deducted from CET1 capital. AVAs arise from uncertainties related to market prices, close-out costs, model risk, unearned credit spreads, investing and funding costs, concentrated positions, future administrative costs, early terminations and operational risks.

## 2. Capital

### 2.1 Capital management

The Group's capital and leverage positions are managed within the Board-approved risk appetite. The Group is well capitalised with low leverage and high levels of loss-absorbing capacity.

The Risk management approach section of the 2019 Annual Report and Accounts sets out our approach to capital management (pages 217 to 218).

### 2.2 Capital resources

All capital instruments included in the capital base meet the requirements set out in the CRR for their respective tier of capital, except for those that are subject to a grandfathering period. Grandfathered capital instruments will be fully phased out of their respective tier of capital by 1 January 2022.

For regulatory purposes, capital is categorised into two tiers, depending on the degree of permanence and loss-absorbency exhibited. These are Tier 1 and Tier 2 capital which are described below.

#### Tier 1 capital

- Tier 1 capital is going concern capital and is available for use to cover risks and losses whilst enabling the organisation to continue trading
- Tier 1 capital comprises permanent share capital, profit and loss account and other eligible reserves, equity non-controlling interests and Additional Tier 1 instruments, after the deduction of certain regulatory adjustments
- Permanent share capital is an item of capital issued by an organisation to an investor, which is fully paid-up and where the proceeds of issue are immediately and fully available. It can only be redeemed on the winding-up of the organisation. Profit and loss account and other eligible reserves are accumulated resources included in shareholders' funds in an organisation's balance sheet, with certain regulatory adjustments applied
- Equity non-controlling interests represent the equity stakes held by non-controlling shareholders in the Group's undertakings

- Additional Tier 1 securities are deeply subordinated instruments which have loss-absorbing qualities such as discretionary coupons, principal write-down or conversion to equity and can therefore be included as Tier 1 capital

#### Tier 2 capital

Tier 2 capital is gone concern capital to help ensure senior creditors and depositors can be repaid if the organisation fails. Tier 2 capital consists of capital instruments which are normally of medium to long-term maturity with an original maturity of at least five years. For regulatory purposes, it is a requirement that these instruments be amortised on a straight-line basis in their final five years of maturity.

Details of the Group's capital instruments (both Tier 1 and 2 capital) are set out in the Standard Chartered PLC Main Features of Capital Instruments document available on the Group's website at <https://www.sc.com/en/investors/credit-ratings-fixed-income/#capitalsecurities>.

Table 8 summarises the consolidated capital position of the Group.

Direct and indirect holdings by the institution of the CET1 instruments of financial sector entities where the institution has a significant investment in those entities (amount below 10% threshold and net of eligible short positions)	1,942	–	1,942	1,633
Deferred tax assets arising from temporary differences (amount below 10% threshold, net of related tax liability where the conditions in Article 38 (3) are met)	1,061	–	1,061	925
<b>Applicable caps on the inclusion of provisions in Tier 2</b>				
Provisions eligible for inclusion in Tier 2 in respect of exposures subject to standardised approach (prior to application of cap)	–	–	–	–
Cap on inclusion of provisions in Tier 2 under standardised approach	619	–	619	586
Provisions eligible for inclusion in Tier 2 in respect of exposures subject to internal ratings-based approach (prior to application of cap)	–	–	–	–
Cap for inclusion of provisions in Tier 2 under internal ratings-based approach	973	–	973	978
<b>Risk-weighted assets</b>				
Credit risk	213,551	–	213,551	210,022
Credit valuation adjustment risk	2,113	–	2,113	1,116
Operational risk	27,620	–	27,620	28,050
Market risk	20,806	–	20,806	19,109
<b>Total risk-weighted assets<sup>5</sup></b>	<b>264,090</b>	<b>–</b>	<b>264,090</b>	<b>258,297</b>
<b>Capital ratios</b>				
Common Equity Tier 1 capital	13.8%	–	13.8%	14.2%
Tier 1 capital	16.5%	(0.6)%	15.9%	16.8%
Total capital	21.2%	(0.1)%	21.1%	21.6%
<b>Capital buffers</b>				
Institution specific buffer requirement (CET1 requirement in accordance with article 92 (1) (a) plus capital conservation and countercyclical buffer requirement, plus systemic risk buffer, plus systemically important institution buffer expressed as a percentage of risk exposure amount.)	10.24%	0.06%	10.30%	9.00%
Of which: capital conservation buffer requirement	2.50%	–	2.50%	1.88%
Of which: countercyclical buffer requirement <sup>6</sup>	0.35%	0.06%	0.41%	0.28%
Of which systemic risk buffer requirement	–	–	–	–
Of which: Global systemically important institution (G-SII) or Other systemically important institution (O-SII) buffer	1.0%	–	1.0%	0.8%
Common Equity Tier 1 available to meet buffers (as percentage of risk exposure amount)	7.4%	–	7.4%	8.1%

1 Retained earnings under CRD IV include the effect of regulatory consolidation adjustments

2 Independently reviewed year-end profits are in accordance with regulatory consolidation rules

3 Foreseeable dividends as at 2019 year-end represent ordinary dividends and preference dividends

4 End point Tier 2 capital includes ineligible AT1 capital subject to grandfathering including any excess over AT1 limit

5 RWA are not covered by the scope of the Audit

6 Transitional adjustment of 6bps shown in 2019 relates to proposed UK CCY Buffer increase from 1% to 2% with effect from 16 December 2020

The main movements in capital in the period were:

- The CET1 ratio decreased from 14.2 per cent to 13.8 per cent predominantly because of higher RWAs, the impact of the \$1.0 billion share buy-back and other distributions to shareholders, including preference dividends, partly offset by profit for the period
- CET1 capital decreased by \$0.2 billion, due to the share buy-back of \$1.0 billion and other distributions during the period of \$1.5 billion, partly offset by profit after tax of \$2.3 billion

→ AT1 increased slightly to \$7.2 billion, mainly due to the new issuance of Singapore Dollar 750 million of AT1 securities

→ Tier 2 capital was unchanged at \$12.3 billion mainly due to \$1 billion of new subordinated debt issuance, offset by amortisation of \$1.1 billion during the year

The Group's current CET1 requirement is 10.2 per cent, comprising:

- A minimum Pillar 1 CET1 requirement of 4.5 per cent

→ A Pillar 2A CET1 requirement of 1.9 per cent being 56 per cent of the total Pillar 2A requirement of 3.4 per cent

→ A capital conservation buffer of 2.5 per cent

→ A G-SII buffer of 1.0 per cent

→ A countercyclical capital buffer of 0.35 per cent

## 2.3 Minimum requirement for own funds and eligible liabilities

From 1 January 2019, a requirement for total loss-absorbing capacity (TLAC) was introduced, as defined in the final standards adopted by the Financial Stability Board (FSB). In the EU, TLAC requirements were implemented by the Capital Requirements Regulation II (CRR II) which was published in the Official Journal of the European Union on the 7 June 2019 and came into effect on 27 June 2019. It included a new framework on minimum requirement for own funds and eligible liabilities (MREL).

MREL is intended to ensure that there is sufficient equity and specific types of liabilities

to facilitate an orderly resolution that minimises any impact on financial stability and ensures the continuity of critical functions and avoids exposing taxpayers to loss. The new framework is complemented with new disclosure requirements. As the specific EU format for disclosure is yet to be agreed, the disclosures are based on the formats provided in the Basel Committee Standards for Pillar 3 Phase 2 disclosures requirements.

The Group's fully phased minimum requirement for own funds and eligible liabilities (MREL) is 22.8 per cent of RWA from 1 January 2022. The Group's combined buffer (the capital conservation, global systemically important institution (G-SII)

and countercyclical buffers) is additive to the minimum requirement, resulting in a total MREL requirement of 26.7<sup>1</sup> per cent of RWA from 1 January 2022. As at 31 December 2019, the Group's MREL position at 31 December 2019 was 28.6 per cent of RWA and 9.4 per cent of leverage exposure.

Details of the Group's MREL eligible instruments are set out in the Standard Chartered PLC Main Features of Capital Instruments document available on the Group's website at <https://www.sc.com/en/investors/credit-ratings-fixed-income/#capitalsecurities>.

Table 11 shows details of the composition of the Group's MREL.

<sup>1</sup> Fully phased minimum 2022 MREL requirement includes the estimated impact of the proposed UK countercyclical buffer increase from 1.0 per cent to 2.0 per cent with effect from 16 December 2020

**Table 11: TLAC composition for G-SIBs (TLAC1)**

	2019 \$million
<b>Regulatory capital elements of TLAC and adjustments</b>	
Common Equity Tier 1 capital (CET1)	36,513

1 Excludes CET1 and is based on accounting carrying values

2 AT1 Preference shares and Contingent Convertible Capital Instruments

3 Senior bonds, derivative liabilities, tax claims etc

TLAC 2 is a G-SII disclosure requirement to provide the ranking of the liability structure of all of the Group's material sub-groups in as defined by the FSB TLAC Term Sheet. The group has 5 material sub-groups; Standard Chartered Bank, Standard Chartered Bank (Hong Kong) Limited, Standard Chartered Bank Korea Limited, Standard Chartered Bank (China) Limited, and Standard Chartered Bank (Singapore) Limited for which disclosure would be required.

The following tables show the nominal values of capital and liabilities and the position in the creditor hierarchy for these material sub-groups.

## 2.4 Countercyclical capital buffer

The Group's countercyclical capital buffer (CCyB) requirement is determined by applying various country-specific CCyB rates to the Group's qualifying credit exposures in the relevant country (based on the jurisdiction of the obligor) on a weighted average basis.

The Group's current CCyB requirement is 0.35 per cent. This includes the impact of the HKMA's decision to reduce its CCyB rate to

2.0 per cent from 2.5 percent announced in October 2019. The majority of the Group's CCyB requirement relates to exposures to Hong Kong counterparties with exposures to other jurisdictions being an immaterial part of the Group's CCyB.

The Financial Policy Committee announced that it would increase the UK countercyclical buffer to 2 per cent from 1 per cent with effect from 16 December 2020. If implemented, this increase in the UK

countercyclical buffer rate is estimated to increase the Group's minimum CET1 requirement by 6 basis points (based on the period end balance sheet) to 10.3 per cent by the end of 2020.

Countries are included in the table if the relevant own funds requirements of that country are greater than 1 per cent of the Group's total relevant own funds requirements for CCyB calculation.

**Table 18: Geographical distribution of credit exposures relevant for the calculation of the countercyclical capital buffer**

Institution specific countercyclical capital buffer requirement	929	730

## 2.5 Capital Requirements

Pillar 1 and Pillar 2A CET1 requirements and the Combined Buffer requirement together represent the Group's Maximum Distributable Amount threshold. The Group will be subject to restrictions on discretionary distributions if the CET1 ratio falls below this threshold. The Group expects to continue to operate with a prudent management buffer above this threshold.

Over time, the Group may also be subject to a PRA buffer. The PRA buffer is intended to ensure the Group remains well capitalised during periods of stress. When setting the Group's PRA buffer, it is understood that the PRA considers results from the Bank of England (BoE) stress test, the biennial exploratory scenario, and bank-specific scenarios undertaken as part of Internal Capital Adequacy Assessment Processes (ICAAPs), as well as other relevant information. The PRA buffer is additional to the existing CRD IV buffer requirements, and is applied if and to the extent that the PRA considers the existing CRD IV buffers do not adequately address the Group risk profile. The PRA buffer is not disclosed.

The table below presents the Group's RWA and capital requirements (calculated as 8 per cent of RWA).

Further information on credit RWAs can be found in Table 55 for credit risk exposures under IRB (which include counterparty credit risk); Table 22 for the RWA flow statements for credit risk exposures under IRB (which includes securitisation balances below); Table 66 for exposures under the SA (which include amounts below the threshold for deduction) and section 4.2 for exposures subject to counterparty credit risk.

<sup>1</sup> The regulatory capital requirement is calculated as 8 per cent of the RWA, and represents the minimum total capital ratio in accordance with CRR Article 92 (1)

<sup>2</sup> Credit risk (excluding counterparty credit risk) includes non-credit obligation assets

<sup>3</sup> Counterparty credit risk includes assets which are assessed under IRB and SA

<sup>4</sup> To calculate operational risk standardised risk-weighted assets, a regulatory defined beta co-efficient is applied to average gross income for the previous three years, across each of the eight business lines prescribed in the CRR

## 2.5 Capital Requirements

### continued

RWA increased by \$5.8 billion, or 2.2 per cent from 31 December 2018 to \$264.1 billion. This was due to an increase in counterparty credit risk RWA of \$2.4 billion, credit risk RWA of \$2.1 billion, and market risk RWA of \$1.7 billion.

→ Credit risk including counterparty credit increased to \$215.7 billion. The increase was driven by:

- \$6.2 billion increase driven by a \$4.0 billion increase in higher liquid assets in Treasury Markets primarily in Europe & Americas and ASA regions. The remaining increase was spread over multiple business areas

- \$3.4 billion increase due to net credit migration, primarily in Greater China & North Asia (GCNA) and Europe & Americas
- \$1.4 billion increase from the implementation of the IFRS16 standard relating to leases on property
- \$0.7 billion decrease due to savings from disposal of an investment in ASEAN & South Asia
- \$0.9 billion decrease in model, methodology and policy changes, driven by the implementation of the Internal Model Method (IMM) for counterparty credit risk
- \$0.9 billion decrease from foreign currency translation due to the depreciation of various currencies against the US dollar

- \$4.0 billion decrease mainly due to \$2.4 billion of efficiencies in financial markets through novation, trade compressions and process enhancement in collateral recognition. The remaining decrease was driven by RWA efficiencies, relating to a number of initiatives across Corporate & Institutional Banking

→ Total Market risk RWA increased by \$1.7 billion, or by 8.9 per cent from 31 December 2018 to \$20.8 billion. This change was due mainly to increased RWA under standardised rules, and a net increase in internal models approach (IMA) RWA following an increase in regulatory backtesting exceptions, partly offset by reduced IMA positions

Table 21 shows the significant drivers of credit risk, market risk and operational RWA movements from 1 January 2019.

1 Other IMA capital add-ons for market risks not fully captured in either VaR or SVaR. More details on Risks not in VaR can be found in the 2019 Annual Report and Accounts on page 192

Market risk RWA under an IMA approach decreased by \$0.5 billion from 31 December 2018 mainly due to reduced positions, partially offset by an increase in the capital multiplier as a result of increased backtesting exceptions.

## 2.6 Leverage ratio

UK banks are currently subject to a minimum leverage ratio of 3.25 per cent. In addition, a supplementary leverage ratio buffer is applicable, set at 35 per cent of the corresponding G-SII capital buffer and the countercyclical capital buffer. These buffers are applied to individual banks and are phased in.

Following the FPC's recommendation to the PRA to exclude qualifying claims on central bank exposures from the leverage exposure measure in the UK leverage ratio framework, and the corresponding waiver granted by the PRA, the Group has been reporting the leverage ratio on a UK basis (excluding qualifying claims on central banks exposures) from March 2017.

At 31 December 2019, the Group's current minimum requirement inclusive of leverage buffers was 3.72 per cent:

- (i) The minimum 3.25 per cent
- (ii) A 0.35 per cent G-SII leverage ratio buffer and

- (iii) A 0.12 per cent countercyclical capital leverage ratio buffer, based on FY 2019 countercyclical capital buffer rates

The Group's current UK leverage ratio of 5.2 per cent is well above the current minimum requirement. The leverage ratio in the period declined 0.4 per cent reflecting: asset growth (on and off-balance sheet), offset by a small increase in Tier 1 capital following the issuance of Singapore Dollar 750 million of new AT1 in the period.

**Table 25: UK and CRR leverage ratio**

	2019 \$million	2018 \$million
Tier 1 capital (end point)	42,006	41,658
UK leverage exposure	801,252	740,602
UK leverage ratio	5.2%	5.6%
CRR leverage exposure	843,395	795,736
CRR leverage ratio	5.0%	5.2%
UK leverage exposure quarterly average	816,244	734,976
UK leverage ratio quarterly average	5.1%	5.8%
Countercyclical leverage ratio buffer	0.1%	0.1%
G-SII additional leverage ratio buffer	0.4%	0.3%

## 2.6 Leverage ratio continued

### CRR leverage ratio

Table 26, 27 and 28 present the leverage ratio based on CRR basis requirements.

**Table 26: Summary reconciliation of accounting assets and leverage exposure**

	2019 \$million	2018 \$million
1 Total assets as per published financial statements	720,398	688,762
2 Adjustment difference between the accounting scope of consolidation and the regulatory scope of consolidation	10,658	9,613
4 Adjustments for derivative financial instruments	(10,094)	(19,408)
5 Adjustments for securities financing transactions (SFTs)	7,005	8,281
6 Adjustment for off-balance sheet items (i.e. conversion to credit equivalent amounts of off-balance sheet exposures)	122,341	115,335
7 Other adjustments	(6,913)	(6,847)
<b>8 Total leverage ratio exposure</b>	<b>843,395</b>	<b>795,736</b>

**Table 27: Leverage ratio common disclosure**

	2019 \$million	2018 \$million
<b>On-balance sheet exposures (excluding derivatives and SFTs)</b>

# 3. Credit risk

Our approach to credit risk can be found in the Risk management approach section in the 2019 Annual Report and Accounts on page 212 to 214.

## 3.1. Internal Ratings Based Approach (IRB) to credit risk

The Group uses the Advanced IRB approach to measure credit risk for the majority of its portfolios. This allows the Group to use its own internal estimates of Probability of Default (PD), Loss Given Default (LGD), and Exposure at Default (EAD) to determine an asset risk-weighting. The IRB models cover 76 per cent of the Group's credit RWA (2018: 77 per cent).

PD is the likelihood that an obligor will default on an obligation within the next 12 months. Banks utilising the IRB approach must assign an internal PD to all borrowers. EAD is the expected amount of exposure to a particular facility at the point of default; it is modelled based on historical experience to determine the amount that is expected to be further drawn down from the undrawn portion of a facility. LGD is the percentage of EAD that a lender expects to lose in the event of obligor default. EAD and LGD are measured based on expectation in economic downturn periods, if these are more conservative than the long-run average.

All assets under the IRB approach have internal PD, LGD and EAD models developed to support the credit decision making process. RWA under the IRB approach is determined by regulatory specified formulae dependent on the Group's estimates of residual maturity, PD, LGD and EAD. The development, use and governance of Corporate and Institutional Banking (CIB), Commercial Banking (CB) and Retail Banking models under the IRB approach are covered in more detail in Section 3.3 Internal Ratings Based models.

## 3.2. Standardised Approach to credit risk

The Standardised Approach is applied to portfolios that are classified as permanently exempted from the IRB approach, and those portfolios for which an IRB approach has yet to be developed, for instance due to insufficient data availability.

CRR Article 150 allows IRB banks to elect to permanently exclude certain exposures from the IRB approach and use the Standardised Approach. These are known as permanent exemptions.

The permanent exemptions apply to:

- Africa – all retail portfolios
- Private Banking
- Private Equity
- Development organisations
- Jordan
- Purchased receivables
- Hedge funds
- Exposures to, or guaranteed by, central governments and central banks of EEA States, provided they are eligible for a zero per cent risk weighting under the Standardised Approach

The Standardised Approach measures credit risk pursuant to fixed risk-weights and is the least sophisticated of the capital requirement calculation methodologies under Basel III. The risk-weight applied under the Standardised Approach is prescribed within the CRR and is based on the asset class to which the exposure is assigned.

## 3.3 Internal Ratings Based models

### Model Governance

All IRB models are developed by Enterprise Risk Analytics (ERA). Both new and existing models, as well as changes to the existing models, are subject to independent validation by Group Model Validation (GMV) and are reviewed and approved by the Credit Model Assessment Committee (CMAC) and the Model Risk Committee (MRC) based on materiality. ERA and GMV are separate departments within Group Risk. The Model Risk and Stress Testing Oversight team (MRO) was established in 2018 to provide independent oversight of model risk management.

The performance of existing IRB models, including actual against predicted metrics, is monitored regularly by ERA and reported to CMAC on a quarterly basis. MRO independently reviews model performance monitoring results based on applicable standards. In addition, existing models are subject to annual independent validation by GMV. The CMAC sets out internal standards for model development, validation and performance monitoring. The Board Risk Committee is updated on the status and performance of IRB models on an annual basis. Rating overrides are tracked and threshold breaches are escalated to the relevant risk management committees, and model issues are tracked at CMAC. An annual self-assessment of IRB models' regulatory compliance is carried out as part of the Senior Management Function attestation.

Group Internal Audit is responsible for carrying out independent audit reviews of IRB models' development, validation, approval and monitoring.

### Probability of Default

PDs are estimated based on one of three industry standard approaches, namely the good-bad approach where a sufficient number of internal defaults is available, the shadow-bond approach where there are no sufficient internal defaults but there are external ratings for a large number of obligors, or the constrained expert judgement approach where neither internal defaults nor external ratings are available.

In CIB and CB, the largest portfolios are rated based on the shadow bond approach (Sovereigns, Banks, Large Corporates) or the good-bad approach (Mid Corporates). Central governments and central banks are rated using the Sovereign model. Non-bank financial institutions are rated using one of six constrained expert judgement models depending on their line of business, with the largest being Funds, Finance & Leasing, and Broker Dealers. Corporate clients are differentiated by their annual sales turnover and rated using one of the corporate models, unless they are commodity traders (for which a separate model has been developed) or are classified under specialised lending. Excluding the Sovereign model, the CIB and CB IRB PD models are subject to the 0.03 per cent regulatory floor.

Within CIB and CB, each client is assigned a credit grade and exposures to each client or client group are aggregated consistently with the regulatory Large Exposures requirements.

CIB and CB PD models are calibrated following a through-the-cycle rating philosophy based on historical data that includes a full economic cycle.

Estimates of PD are computed as of 1 January 2019 and are compared with default observations through 31 December 2019.

Our historical default experience for institutions, central governments or central banks is minimal, so the predicted PD reflects a particularly low number of defaults. We experienced no defaults for central governments or central banks during 2019.

The actual default rates for institutions and corporate exposures in 2019 remained below IRB model predictions as at the beginning of 2019, based on the arithmetic average PD by obligors.

PD models for retail clients under each asset class are developed based on a combination of product and geography following the good-bad approach.

### 3.3 Internal Ratings Based models continued

The same PD modelling approach is taken across the four key retail client product types: Residential Mortgages, Credit Cards (Qualifying Revolving Retail), Personal Instalment Loans (Other Retail) and Retail SME (Other Retail). The approach is based on using the country and product specific application scores for new to bank clients and behaviour scores for existing clients. The scorecards are built using demographic information, financial information, observed client performance data (for behaviour scores), and where available, credit bureau data. Statistical techniques are used to develop a relationship between this information and the probability of default. The scorecards are used to make credit decisions. In addition, the PD models are segmented by delinquency status. All retail client PD models are built and validated using internal default data and are subject to the 0.03 per cent regulatory floor.

The actual default rates for the 'Residential mortgages', 'Qualifying revolving retail' and 'Other retail' asset classes remained below the model predictions, based on the arithmetic average PD by obligors, but actual default rates were above model predictions for the 'Retail SME' asset class. The higher actual default rate for 'Retail SME' was a result of increased defaults in the Korean and Hong Kong business clients segments.

#### Loss Given Default

The CIB and CB LGD model is a parameter-based model reflecting the Bank's recovery and workout process, which takes into account risk drivers such as portfolio segment, product, credit grade of the obligor and collateral attached to the exposure. The model is calibrated based on downturn experience, if that is more conservative than the long-run experience. Regulatory floors are applied to unsecured LGD for sovereign and financial institutions exposures, and to fully secured facilities (except if secured by cash). This is in accordance with the PRA's low-default framework which states that where there are insufficient defaults to estimate a parameter at granular level an LGD floor must be applied.

The calculation of realised versus predicted LGD is affected by the fact that it may take a number of years for the workout process to be completed. As such, an observed recovery value cannot be assigned to the majority of the 2019 defaults, making it meaningless to compare realised versus predicted outcomes in a manner similar to that for PD and EAD.

To address this for corporate and institutions we have adopted an approach based on a four-year rolling period of predicted and realised LGD, which for the current reporting year includes 2016 to 2019 defaults that have completed their workout process as at the end of 2019. This approach compares the four-year rolling predicted LGD, providing the predicted outcome of these resolved defaults one year prior to default, against the realised LGD for the same set of defaults. These two figures are fully comparable, thereby providing a meaningful assessment of the LGD model's performance.

Under this approach, realised LGD values for corporates are lower than the predicted. This is explained by the regulatory guidance to calibrate LGD models to downturn conditions. There were no defaults in the previous four years for central governments and central banks. LGD for institutions reflects one completed workout during the four-year rolling period for which actual loss was significantly below predicted loss.

LGDs for retail portfolios follow two approaches:

- (i) LGDs for unsecured products are based on historical loss experience of defaults during a downturn; these are portfolio-specific LGD estimates segmented by default status (including restructuring)
- (ii) LGDs for secured products are parameter-based estimates mainly driven by how the default is resolved (cure, sale or charge-off). Key LGD parameters are differentiated by segments such as loan-to-value, property type and default status. These parameters are calibrated based on the portfolio's downturn experience

Retail LGD model development considers defaults from a cohort and the actual recoveries up to the end of the workout window which is typically two to three years. For retail asset classes, the observed LGD from the December 2016 cohort (existing defaults and those defaulted in the next 12 months) was calculated based on actual recoveries observed from January 2017 until December 2019. This is compared to the predicted outcome of the same set of defaults.

Under this approach, realised LGD values for all retail asset classes are lower than predicted, primarily due to the regulatory guidance to calibrate LGD models to downturn conditions. This is most evident in the mortgage portfolios, where predicted LGD values include a significant assumed reduction in property values.

#### Exposure at Default

EAD takes into consideration the potential drawdown of a commitment as an obligor moves towards default by estimating the Credit Conversion Factor (CCF) of undrawn commitments.

EAD for corporate and institutional clients is determined on a global basis, while the commercial and retail EAD is dependent on the combination of country and product.

The corporate and institutional EAD model has adopted the momentum approach to estimate the CCF, with the type of facility and the level of utilisation being key drivers of CCF. The model is calibrated based on the Bank's internal downturn experience and floored at 0 per cent.

EAD for retail products differs between revolving products and term products. For revolving products, EAD is computed by estimating the CCF of undrawn commitments, with a floor at 0 per cent. For term products, EAD is set at the outstanding balance plus any undrawn portion. All the retail client EAD models are built and validated using internal default data.

The comparison of realised versus predicted EAD is summarised in the ratio of EAD of assets that defaulted in 2019 to the outstanding amount at time of default. The ratios for all models are larger than one, indicating that the predicted EAD is higher than the realised outstanding amount at default. This is explained by the regulatory guidance to assign conservatism to the CCF of certain exposure types and to calibrate the models to downturn conditions, as well as by the impact of management action leading to a reduction in actual exposure prior to default.

The Group has a strong monitoring and governance framework in place to identify and mitigate model performance issues. While most models are conservative and over predict PD, LGD and EAD, in cases where the models under predict, a post model adjustment may be taken to ensure adequate capitalisation, in addition to having a remediation plan in place.

The estimates provided in the tables are before the application of any conservative adjustment.

### 3.4 Exposure values

The following tables detail the Group's EAD (including counterparty risk) before the effect of collateral but after the effect of substitution, broken down by exposure class and further split by geography, industry and maturity. For credit risk exposures, EAD is based on the current outstanding exposure and accrued interest and fees, which are recognised in the Group's balance sheet in accordance with IFRS, and a proportion of the undrawn component of the facility. The amount of the undrawn facility included is dependent on the product type and for IRB exposure classes this amount is modelled internally.

Exposure classes are presented in accordance with the CRR rules and are based on counterparty type. This differs from the product-based approach applied in the Annual Report and Accounts.

Geographical analysis is based on the residency of the counterparty. Maturity analysis is based on the residual maturity of the exposure in line with the maturity analysis in the 2019 Annual Report and Accounts on page 177 to 178.

EAD increased by \$23.4 billion (Tables 40 to 43) mainly due to:

- IRB corporates EAD increased \$26.4 billion driven by an increase in loans and SFT transactions, primarily in Europe & Americas
- IRB central governments and central banks EAD increased \$13.3 billion driven by an increase in bonds in Europe & Americas
- Standardised corporates EAD increased \$7.9 billion driven by an increase in Reverse Repo transactions, primarily in Europe & Americas

Offset by:

- IRB institutions EAD decreased \$14.5 billion driven by a reduction across multiple product lines, primarily in GCNA
- Standardised institutions EAD decreased \$12.7 billion driven mainly by a decrease in repos in Europe & Americas
- Standardised central governments and central banks EAD decreased \$3.9 billion mainly in Europe & Americas

#### Maturity analysis

The table below shows the Group's exposure on a residual maturity basis. This is consistent with the maturity analysis in the Annual Report and Accounts on page 177 which is based on accounting balances. Approximately 64 per cent (2018: 67 per cent) of the Group's exposure is short term, having residual maturity of one year or less. The portfolio of central government or central banks, institutions and corporates is predominantly short term with 73 per cent (2018: 76 per cent) of EAD having a residual maturity of one year or less. In Retail, the longer maturity profile of the IRB portfolio is driven by the mortgage book which makes up 68 per cent (2018: 69 per cent) of the portfolio and is traditionally longer term in nature and well secured. Whilst the Other and SME loans in Retail have short contractual maturities, typically they can be renewed and repaid over longer terms in the normal course of business.

### 3.4 Exposure values continued

#### Credit quality of exposures

Tables 44 to 46 break down defaulted and non-defaulted exposures by exposure class, as defined in the CRR, and by industry and geography. Exposure values presented in the tables are before the impact of Credit Conversion Factors (CCF) and funded Credit Risk Mitigation (CRM) but after substitution.

All Standard Chartered accounting provisions are categorised as specific credit risk adjustments according to the EBA RTS on specification of the calculation of specific and general credit risk adjustments (EBA/RTS/2013/04). The column for general credit risk adjustments as included in the prescribed templates of the EBA disclosure guidelines has therefore been removed. Net values equate to EAD after deduction of specific credit risk adjustments.

Values in Tables 47 to 50 are gross carrying values in accordance with IFRS. Tables 47 to 50 depict past-due exposures, broken down by past-due bands and provide further information on non-performing and forborne exposures.

The 2019 Annual Report and Accounts pages 158 to 180 provide additional information on credit quality analysis.

### 3.5 Regulatory expected loss vs. impairment charge

The Risk profile section of the 2019 Annual Report and Accounts provides on page 152 an overview of the key differences between regulatory and IFRS expected credit loss models. The table below compares the regulatory expected loss at 31 December 2019 against expected credit loss in the 2019 Annual Report and Account for the IRB portfolio.

**Table 52: Regulatory expected loss**

	2019		2018	
	Regulatory expected loss \$million	Net impairment charge \$million	Regulatory expected loss \$million	Net impairment charge \$million
IRB Exposure Class <sup>1</sup>				
Central governments or central banks	125	(4)	137	(260)
Institutions	68	4	69	(272)
Corporates	5,243	(954)	4,165	1,108
Retail, of which	914	27	809	38
Secured by real estate collateral	79	(2)	68	(119)
Qualifying revolving retail	263	13	276	27

<sup>1</sup> 2018 Regulatory expected loss has been restated to reflect the change in accounting treatment of interest in suspense

Expected loss reduced by \$0.4 billion reflecting the changes to the Group's risk profile. The overall decrease in expected losses is mainly driven by an improvement in the credit quality of Corporates exposures.

### 3.6 Risk grade profile

#### Exposures by internal credit grading

For CIB and CB IRB portfolios an alphanumeric credit risk-grading system is used. The grading is based on the Group's internal estimate of probability of default over a one-year horizon, with customers or portfolios assessed against a range of quantitative and qualitative factors. The numeric grades run from 1 to 14 and some of the grades are further sub-classified. Numerically lower credit grades are indicative of a lower likelihood of default. Credit grades 1 to 12 are assigned to performing customers and credit grades 13 and 14 are assigned to non-performing or defaulted customers. The Group's credit grades in CIB and CB are not intended to replicate external credit grades, and ratings assigned by external credit assessment institutions (ECAI) are not used in

determining internal credit grades. Nonetheless, as the factors used to grade a borrower may be similar, a borrower rated poorly by an ECAI is typically expected to be assigned a weak internal credit grade.

For Retail exposures, application and behaviour credit scores are calibrated to generate a PD and mapped to the standard alphanumeric credit risk grade system. Where available, information from credit bureaus is considered, but is not the sole determinant for PDs.

IRB models cover a substantial majority of the Group's exposures and are used extensively in assessing risks at customer and portfolio level, setting strategy and optimising the Group's risk-return decisions. The Group makes use of internal risk estimates of PD, LGD and EAD in the areas of:

- Credit Approval and Decision – In CIB and CB, the level of authority required for the sanctioning of credit requests and the decision made is based on a combination of PD, LGD and EAD of the obligor with reference to the nominal exposure. In

Retail, credit scores are relied upon as one of the primary drivers for credit decisioning. The recession loss (derived from PD, LGD and EAD) is used for determining level of approval authority required for Credit Approval Documents which outlines peak exposure and credit acceptance criteria for the portfolio.

- Pricing – In CIB and CB, a pre-deal pricing calculator, which takes into consideration PD, LGD and EAD in the calculation of expected loss and risk-weighted assets, is used for the proposed transactions to ensure appropriate returns. In Retail unsecured lending, a risk-return approach based on PD estimates is used as guidance for pricing strategy.
- Limit Setting – In CIB and CB, single name concentration limits are determined by PD, LGD and EAD. The limits operate on a sliding scale to ensure that the Group does not have an excessive concentration of low credit quality assets. In Retail unsecured lending, limit assignment / loan amounts are risk-based and segregated by credit score bands.

1 The regional split is based on the residence of the counterparty

2 2018 weighted averages have been restated to reflect the change in accounting treatment of interest in suspense

### 3.6 Risk grade profile continued

Table 54 sets out credit and counterparty risk EAD within the IRB portfolios by regulatory exposure classes. EAD has been calculated after taking into account the impact of credit risk mitigation. Where an exposure is guaranteed or covered by credit derivatives, it is shown against the exposure class of the guarantor or derivative issuer. A further split of the major exposure classes by credit grade can be seen in Tables 56 to 64.

IRB credit risk excluding counterparty credit risk EAD increased by \$29.9 billion and RWA decreased by \$1.2 billion (Tables 56 to 64):

- Central governments and central banks EAD increased \$16.6 billion and RWA increased by \$0.6 billion driven by an increase in Fixed and Floating rate notes and bond exposures mainly in Europe & Americas
- Institutions EAD decreased \$3.7 billion and RWA \$1.8 billion driven by an increase in exposures to GCNA
- IRB corporates EAD increased \$10.3 billion, principally in Europe & Americas. RWA decreased \$1.1 billion across multiple product lines and regions
- IRB Retail EAD increased \$5.2 billion and RWA \$1.3 billion driven by an increase in loans and mortgages, primarily in GCNA

### 3.6 Risk grade profile continued

The table below demonstrates Standard Chartered's internal ratings and its approximate relation to external credit ratings.

Tables 56 to 64 and tables 89 to 93 provide further detail on the exposure classes subject to credit and counterparty credit risk, in particular for central governments or central banks, institutions, corporates and retail. These have been split by internal credit grade which relate to the PD ranges presented. These exposure classes represent 81 per cent (2018: 80 per cent) of the Group's total credit risk exposure before collateral.

**Table 55: Internal default grade probabilities and mapping to external ratings**

### 3.7 Credit risk mitigation

Potential credit losses from any given account, customer or portfolio are mitigated using a range of tools such as collateral, netting agreements, credit insurance, credit derivatives and guarantees. The reliance that can be placed on these mitigants is carefully assessed in light of issues such as legal certainty and enforceability, market valuation, correlation and counterparty risk of the guarantor. The presence of credit risk mitigation is not a substitute for the ability to pay, which is the primary consideration for any credit decision, but may influence credit limit sizing, for example eligible financial

collateral taken under eligible master netting agreements supported by a legal opinion may be netted against exposures. Where appropriate, credit derivatives are used to reduce credit risks in the portfolio. Due to their potential impact on income volatility, such derivatives are used in a controlled manner with reference to their expected volatility. Collateral is held to mitigate credit risk exposures and risk mitigation policies determine the eligibility of collateral types. Collateral concentrations are monitored and reported to the relevant risk committees. The Group uses credit limits to record guarantees taken against individual guarantors where a

capital benefit is taken. The Group uses netting in the case of financial market's transactions under master netting agreements supported by a legal opinion.

Our approach to credit risk mitigation can be found in the Risk management approach section of the 2019 Annual Report and Accounts on pages 174 to 178.

The table below shows the unfunded credit protection held by the Group, consisting of credit derivatives and guarantees, and funded credit protection, including financial collateral. Exposure class has been defined based on the guarantor of the exposure.

**Table 65: CRM techniques – overview (CR3)**

1 EAD before the effect of collateral and substitution

2 Other items includes public sector entities

3 Refer to Table 20 (OV1): Standardised approach \$41,395 million and amount below threshold for deduction \$7,507 million RWA

### 3.8 Standardised risk weight profile

External ratings, where available, are used to assign risk weights for standardised approach (SA) exposures. These external ratings must come from EU approved rating agencies, known as External Credit Assessment Institutions (ECAI); which currently include Moody's, Standard & Poor's and Fitch. The Group uses the ECAI ratings from these agencies in its day-to-day business, which are tracked and kept updated. Assessments provided by approved ECAI are mapped to credit quality steps as prescribed by the CRR.

The Group currently does not use assessments provided by export credit agencies for the purpose of evaluating RWA in the standardised approach.

The following tables set out EAD and EAD after CRM associated with each risk weight as prescribed in Part Three, Title II, Chapter 2 of the CRR, including credit and counterparty credit risk regulatory risk weights based on the exposure classes applied to unrated exposures.

Standardised EAD pre CRM and pre CCF increased \$8.2 billion driven by:

- Central governments and central banks EAD increased by \$2.1 billion, primarily in Europe & Americas
- Retail EAD increased by \$3.3 billion, primarily in ASEAN & South Asia
- Other items EAD increased by \$1.6 billion across GCNA (\$0.6 billion), ASEAN and South Asia (\$0.6 billion) and Europe & Americas (\$0.4 billion)
- Institutions EAD increased by \$1.4 billion driven by increased exposures across Europe & Americas (\$0.6 billion) and ASEAN & South Asia (£0.4 billion)

### 3.8 Standardised risk weight profile continued

→ Other items EAD increased by \$1.6 billion across GCNA (\$0.6 billion), ASEAN and South Asia (\$0.6 billion) and Europe & Americas (\$0.4 billion)

→ Retail EAD increased by \$1.2 billion, primarily in ASEAN & South Asia

### 3.9 Securitisation

Securitisation is defined by the CRR as a transaction or scheme where the credit risk of an exposure or pool of exposures is tranching and where the payments arising from the transaction or scheme are dependent upon the performance of the underlying exposure(s) and where the subordination of tranches determine the distribution of losses during the ongoing life of the transaction or the scheme.

Securitisation can be categorised as either:

- **Traditional securitisation:** A securitisation involving the economic transfer of the exposures being securitised via the transfer of ownership of securitised exposures from the originator institution to a securitisation special purpose entity (SSPE), where the securitised assets are beyond the reach of the originator and its creditors. The purchase of the assets by the SSPE are usually funded via the issuance of securities where the payments obligations does not belong to the originator institution
- **Synthetic transaction:** A securitisation where the originator retains the ownership of the underlying exposure(s) and transfer the associated credit risk of the securitised exposures to third party through the use of credit derivatives or guarantees

The Group has undertaken securitisation of its own originated assets to diversify sources of funding and capital management and may play one or more of the following roles in a securitisation transaction:

**Originator** – The Group securitised assets (Corporate loans and trade finance facilities) originated in its normal course of business for capital management and diversification of its sources of funding. The Group may be exposed to credit and market risk on the underlying assets, particularly if the structure of the transaction does not transfer these risks to third parties.

**Investor** – To generate financial returns, the group may purchase securitised issued by third-party SSPE or purchased securities from SSPE which it originates for market making purpose.

**Arranger** – The Group may act as arranger for securitisation transactions it originates or by its customers, usually financial institutions or large corporates.

**Underwriter** – The Group may underwrite the securities issued by a SSPE originated by the Group or for its customers.

**Credit Event Monitor Agent** – Monitor the credit quality of the underlying securitised assets on behalf of the SSPE or investors.

**Account Bank** – The Group may hold the bank account of a SSPE originated by the Group on its own books.

**Program Manager** – Report on the performance of the securitised assets of the SSPE to investors.

**Servicer** – Manage and service the asset pool of the securitisation transactions.

The Group has \$15.6 billion (2018: \$24.0 billion) of EAD classified as securitisation positions, as shown in Table 73 on page 76. These transactions meet the criteria to qualify as securitisation positions under the PRA's securitisation framework and the particulars of these transactions are discussed below.

#### Asset Backed Securities

The carrying value of asset backed securities (ABS) of \$8.3 billion (2018: \$7.5 billion), held either as investments or arranged for clients, represents 1 per cent of the Group's total assets (2018: 1 per cent).

The portfolio comprises of a mix of client-based trades, market making and a Portfolio of liquid ABS investments for the Treasury Markets (TM) book. These purchases by TM are governed by a set of portfolio limits and standards which include an aggregate portfolio limit besides sub limits on the underlying collateral types, jurisdictions, originators, issue size, seniority, rating and tenor.

The credit quality of the ABS portfolio remains strong, with over 97 per cent of the overall portfolio rated Investment Grade, and 89 per cent of the overall portfolio is rated as AAA. The portfolio is diversified across asset classes and geographies. Residential mortgage-backed securities (RMBS) make up 68 per cent of the overall portfolio and have a weighted averaged credit rating of AAA. This also includes US Agency MBS and Korean Agency MBS (AAA in 2018).

Other ABS include Auto ABS, comprising 12 per cent of the overall portfolio, CLOs (5 per cent) The balance of Other ABS mainly includes securities backed by CMBS, Credit Cards, consumer loans, diversified payment rights, and receivables ABS.

The notional and carrying values of the ABS purchased or retained by the Group are shown in the table below analysed by underlying asset type. ABS are accounted for as financial assets. For further details regarding recognition and impairment, refer to note 24 to the financial statements of the 2019 Annual Report and Accounts, page 330. The ABS portfolio is assessed frequently for objective evidence of impairment. In 2019, there were no additional impairments in the portfolio.

Valuation of retained interest is initially and subsequently determined using market price quotations where available or internal pricing models that utilise variables such as yield curves, prepayment speeds, default rates, loss severity, interest rate volatilities and spreads. The assumptions used for valuation are based on observable transactions in similar securities and are verified by external pricing sources, where available.

The ABS portfolio is closely managed by a centralised dedicated team. The team has developed a detailed analysis and reporting framework of the underlying portfolio to allow senior management to make an informed holding decision with regards to specific assets, asset classes or parts of an asset class. These ABS portfolio reports are closely monitored by the Risk function in the Group.

The notional and carrying values of the ABS purchased or retained by the Group are shown below in the table analysed by underlying asset type.

#### Capital Structuring & Distribution Group Balance Sheet Securitisation

##### Synthetic Securitisation - Significant Risk Transfer (SRT) trades

The Group via its Capital Structuring & Distribution Group (CSDG) Balance Sheet Securitisation unit buys synthetic protection for its banking book credit portfolio. Securitisation provides capacity for client-focused growth and improves efficiency of economic and regulatory capital. The Group as the originator performs multiple roles, including protection buyer, calculation agent and credit event monitor agent. The protection buyer executes and maintains securitisation transactions. The calculation agent computes periodic coupon payments and loss payouts. The credit event monitor agent validates and provides notifications of credit events.

Treasury Markets unit performs a different role, acting as deposit taker for funds collected from the credit protection providers. Deposits collected eliminate counterparty risk for transactions where the Group is the protection buyer.

The securitised assets consist of commercial loans and trade finance facilities extended by the Group's branches and subsidiaries to borrowers mainly from the emerging markets in Asia, Africa & Middle East. The securitised assets are subject to changes in general economic conditions, performance of relevant financial markets, political events and developments or trends in a particular industry. Historically, the trading volume of loans in these emerging markets has been small relative to other more developed debt markets due to limited liquidity in the secondary loan market.

The securitised assets are originated by the Group in its ordinary course of business. Given the synthetic nature of securitisations originated by CSDG Balance Sheet Securitisation unit, the securitised assets remain on the Group's balance sheet and continue to be subject to the Group's credit review and monitoring process and risk methodology. Accordingly retained positions are not hedged.

In its role as credit event monitor agent, CSDG Balance Sheet Securitisation unit monitors the credit risk of the underlying securitised assets by leveraging on the Group's client and risk management system.

As of 31 December 2019, \$11.4 million of Trade Finance (2018: \$0.2 million) and \$33.3 million of Commercial Loans (2018: \$17.7 million) totalling \$44.7 million (2018: \$17.9 million) of securitised exposures were classified as impaired and past due.

The Group has seven synthetic securitisation transactions originated and managed by CSDG Balance Sheet Securitisation unit, with an aggregate hedge capacity of \$17 billion (2018: \$18.0 billion). CSDG Balance Sheet Securitisation unit as the originator has not acted as sponsor to securitise third-party exposures and does not manage or advise any third-party entity that invests in the securitisation positions. Table 71 provides details of current securitisation programmes originated and managed by the Group.

### 3.9 Securitisation continued

#### Capital Structuring & Distribution Group Balance Sheet Securitisation continued

The Group transfer credit risk of underlying securitised assets (refer to Table 71) to non-consolidated securitisation special purpose entity (SSPE) via credit derivatives. In these transactions, the underlying assets are not sold into the relevant SSPE. Instead, the credit risk of the underlying assets is transferred to the SSPE synthetically via credit default swaps whereby the SSPEs act as sellers of credit protection and receive premiums paid by the Group in return. The SSPE in turn issue credit-linked notes to third party investors who fund the credit protection in exchange for coupon on the notes purchased. The premium received by the SSPE and interest earned on the funded amount of the purchased notes are passed through to the third-party investors as coupon on the purchased notes. Payment to the third-party investors is made in accordance with the priority of payments stipulated in the transaction documents.

#### Traditional Securitisation

The Group entered into traditional securitisation transaction to diversify its sources of funding. The Group originated a revolving cashflow traditional trade finance securitisation transaction, which consolidated the SSPE (Prunelli Issuer S.a.r.l.) into the Group's financials as required under IFRS 10 as the Group was deemed to have control over the SSPE. Assets sold to the SSPE continue to remain on the Group's balance sheet as they did not satisfy derecognition criteria under the Group's accounting policy.

As of 31 December 2019, the outstanding securitised exposures were \$624 million (2018: \$942 million).

#### Governance of securitisation activities

Securitisation transactions proposed for funding and capital management must obtain support from the Group Operational Balance Sheet Committee (OBSC), which manages the capital requirements of the Group. For a securitisation transaction that will lead to reduction in regulatory capital, it must be submitted to UK PRA for review one-month post deal close.

Execution of each securitisation transaction must either be approved through a Product Programme (PPG) or an individual Transaction Programme Approval (TPA) where approvals across all functions involved in the transaction are obtained. Specifically, Compliance covers issues like confidentiality of clients' information and insider information, Group Tax provides an opinion on taxation, Group Risk advises on the regulatory treatment and Finance advises on the accounting treatment and facilitates communication with the regulator.

#### Basel III for securitisation positions

The calculation of risk-weighted exposure amounts for securitisation positions is based on the following two calculation methods advised by the PRA:

- IRB method for third-party senior securitisation positions bought and securitisation positions originated and retained by the Group (including haircuts due to currency and collateral mismatch)
- Standardised Approach for the residual risk-weighted exposure amounts for all other securitisation positions originated by the Group and sold. For instance, risk-weight substitution under the Standardised Approach is adopted in unfunded transactions where cash collateral is with a third party

The Synthetic securitisation transactions originated by the Group in Table 71 meet the Significant risk transfer requirement ("SRT") under the CRR. Where securitisations do not achieve SRT (for instance when they are entered into for funding purpose), their associated exposures will be presented in other sections of the Pillar 3 report. Synthetic Securitisation transactions (Table 71) executed prior to 2019 are rated by an external credit assessment institution, namely Moody's. Transactions executed from 2019 are unrated as the bank utilised SEC-IRBA for risk capital calculation under CRR IV.

#### Accounting

Accounting assessment takes place at the time of transaction closing. The Group consolidate structured entities (including SSPE) when the substance of the relationship indicates control over the SSPE. The Group

controls an entity if it has all the three elements of control which are i) power over the entity; ii) the ability to use its power over the entity to affect the returns of the Group and iii) exposure to variable returns from its involvement with the entity. The consolidation treatment is initially assessed at inception and is reassessed if circumstances indicate that there are changes to one or more of the three elements of control.

A securitisation transaction is recognised as a sale or partial sale where derecognition is achieved. The difference between the carrying amount and the consideration received is recorded in the income statement. Securitisation transactions which do not achieve derecognition are treated as financing activity. In a synthetic securitisation transaction, the underlying assets are not sold into the securitisation special purpose entity (SSPE). Instead, the underlying assets' performance is transferred into the SSPE through a synthetic instrument such as a CDS, a credit-linked note or a financial guarantee. Synthetic securitisation are assessed using the same accounting approach summarised above, with the associated credit derivative accounted as a financial guarantee under IFRS 9. As of both 31 December 2019 and 31 December 2018, no securitised assets have been derecognised from the Group's balance sheet.

Financial assets awaiting for securitisation are valued using the Group's accounting policy for financial instrument. There are no assets classified as awaiting securitisation for both 31 December 2019 and 31 December 2018.

Any financial support or contractual arrangements provided to unconsolidated entities for securitised assets would be recognised as a liability on balance sheet if it met the relevant IFRS criteria. The Group has not provided support to any securitisation transactions beyond its contractual obligations.

The Group's approach to accounting for SSPEs can be found in the notes to the financial statements in the 2019 Annual Report and Accounts.

### 3.9 Securitisation continued

<b>Total</b>				<b>16,550</b>	<b>15,095</b>	<b>15,280</b>	<b>966</b>	<b>291</b>

Assets securitised by the Group's in its capacity as originator increased by \$0.5 billion to \$17 billion:

**Traditional Securitisation:**

- There was no traditional securitisation executed by the Group during the year.

**Synthetic Securitisation:**

- The Group synthetically securitised \$2.5 billion portfolio of revolving credit facilities exposures, referencing the EAD amount of the facilities.
- Two transactions (Start X and Baruntse), referencing \$4 billion matured in 2019 and was replaced by a new transaction, Gongga (\$2 billion).

The following tables show the distribution of the Group's securitisation exposures across risk-weights. The vast majority of the Group's exposure to securitisation programmes is to the lower risk weighted tranches.

The Rating Based Approach (under the previous securitisation regime) is used to calculate risk-weights for all the rated tranches of securitisation transactions that were executed prior to 1st January 2019. Transactions executed from 1st January 2019 uses the SEC-IRBA method to calculate risk-weights for all tranches as required under the new Securitisation Regulation (EU) No 2017/2401 (amendments to Capital Requirement Regulation or CRR).

As there is a '1-year grandfathering provision' in the new Securitisation Regulation (EU) No 2017/2401 (amendments to Capital Requirement Regulation or CRR) that is available to significant risk transfer transactions executed prior to the 1st January 2019 (go-live date), both Tables 72 and 73 are organised to reflect the Group securitisation exposures across risk-weights under both frameworks.

## 4. Traded risk

Our approach to Traded risk can be found in the Enterprise Risk Management approach section in the 2019 Annual Report and Accounts on pages 215 to 216.

### 4.1 Market risk

Interest rate risk from non-trading book portfolios is transferred to local Treasury Markets desks under the supervision of local Asset and Liability Committees. Treasury Markets deals in the market in approved financial instruments in order to manage the net interest rate risk, subject to approved Value at Risk (VaR) and risk limits.

The primary categories of market risk for the Group are:

- Interest rate risk: arising from changes in yield curves, credit spreads and implied volatilities on interest rate options
- Foreign exchange rate risk: arising from changes in exchange rates and implied volatilities on foreign exchange options
- Commodity risk: arising from changes in commodity prices and implied volatilities on commodity options; covering energy, precious metals, base metals and agriculture as well as commodity baskets
- Equity Risk: arising from changes in the prices of equities, equity indices, equity baskets and implied volatilities on related options

### Trading book

The Trading book contains positions held with trading intent or hedges for such positions. The Traded Risk Framework sets out the Group's standard systematic approach to risk managing market risk. The Trading Book Policy Statement identifies the policies and procedures determining the positions included in the Trading book and their risk management and valuation. All trading book desks are subject to market risk limits. Traded Risk Management, an independent risk control function, monitors the limits and reports daily to senior management.

### Valuation framework

Valuation of financial assets and liabilities held at fair value is subject to an independent review by Valuation Control within the Finance function. For those financial assets and liabilities whose fair value is determined by reference to externally quoted prices or market observable pricing inputs or to a valuation model, an assessment is made by Valuation Control against external market data and consensus services. Valuation Control also ensures adherence to the valuation adjustment policies to incorporate bid/ask spreads, model risk and other reserves, and, where appropriate, to mark all positions in accordance with prevailing accounting and regulatory guidelines.

The Valuation and Benchmarks Committee (VBC), a sub-committee of the Corporate, Commercial and Institutional Banking Risk Committee, provides oversight and governance of all financial markets valuation adjustments and price testing policies and reviews the results of the valuation control process on a monthly basis. In addition, the VBC also provides governance over the Group's benchmark rates review process.

Our approach to market risk can be found in the Risk management approach section in the 2019 Annual Report and Accounts on page 216.

### Management VaR

Management VaR is one of the tools used by management to monitor the total market risk within the trading and banking books.

### Regulatory VaR

Regulatory VaR is used to estimate the potential loss, from market movements, across trading book positions for which the Bank has received permission to apply the internal model approach (IMA). Regulatory VaR, including Stressed VaR and Risk Not in VaR (RNIV) measures, is used to calculate market risk RWAs for positions falling under the IMA permission.

### Regulatory VaR vs Management VaR

Variable	Regulatory VaR	Management VaR
Confidence level	99%	97.5%
Historical Observation	260 business days unweighted	260 business days unweighted
Liquidity Horizon	1 day Scaled to 10-day VaR by multiplying by the square root of 10. A more conservative multiplier is applied if statistical hypothesis testing shows that the square root of 10 multiplier is not sufficiently appropriate.	1 day
Updating Frequency	1 day	1 day
Scope	As approved by the PRA, under Internal Model Approval (IMA)	All non-structural market risk exposures across the trading and non-trading books.
<p>The VaR simulation applies full revaluation to all products, except for FX, bonds and simple cash flow products where the cash flows are discounted with a single benchmark yield curve adjusted by the Interest rate VaR shocks.</p>		
	Both management and regulatory VaR simulations apply the same valuation approaches.	The VaR simulations currently generally apply relative returns to most market risk factors except interest rates where absolute changes in zero coupon yields are applied.

## 4.1 Market risk continued

The PRA has granted the Group permission to apply IMA for the following entities:

Standard Chartered Bank	Solo and consolidated
Standard Chartered Bank (Singapore) Ltd	Consolidated
Standard Chartered Bank (Hong Kong) Ltd	Consolidated
Standard Chartered Securities (India) Ltd	Consolidated
Standard Chartered Bank (China) Ltd	Consolidated
PT Standard Chartered Securities Indonesia	Consolidated
Standard Chartered Bank Korea Ltd	Consolidated
Standard Chartered Bank Malaysia Berhad	Consolidated
Standard Chartered Bank (Taiwan) Ltd	Consolidated
Standard Chartered Bank (Thai) PCL	Consolidated
Standard Chartered Bank (Vietnam) Ltd	Consolidated
Standard Chartered Bank AG	Consolidated

### Backtesting

Backtesting is performed to ensure that the VaR model is fit for purpose. It measures the ability of the model to correctly reflect the potential level of losses under normal trading conditions, for a certain confidence level.

A backtesting breach is recorded when the net trading P&L loss in one day is greater than the estimated VaR for the same day.

Prudential regulation specifies that a model with fewer than five backtesting exceptions in a 12-month period is deemed to be in the 'green zone'. At the end of 2019 the Group is in the 'yellow zone' with five backtesting exception in 2019. For details see the further Pillar 3 disclosure on regulatory backtesting below.

### Stressed VaR

Stressed VaR applies the same model as for regulatory VaR but using a one-year historical observation period from a stressed period relevant to the trading book portfolio. In 2019, the stressed period applied was the 260 business days ending 30 June 2009 reflecting the Global Financial Crisis.

### Stress testing

Group-wide stress testing is performed to measure the potential loss on a portfolio of financial positions due to low probability market events or risk to the Group posed by a breakdown of risk model assumptions.

So stress testing supplements the use of VaR as the primary measure of risk. The roles and responsibilities of the various business functions are set out in the Traded Risk Stress Testing standard.

### Market risk changes

The average level of total trading and non-trading VaR in 2019 was \$30.2 million, 47 per cent higher than in 2018 (\$20.6 million). The actual level of total trading and non-trading VaR in 2019 was \$34.4 million, 35 per cent higher than in 2018 (\$25.5 million). The increase in total average VaR was driven by the non-trading book, which has seen an increase in the bond inventory size in high-quality assets from Treasury Markets business.

For the trading book, the average level of VaR in 2019 was \$11 million, 12 per cent higher than in 2018 (\$9.8 million). Trading activities have remained relatively unchanged and client-driven.

## 4.1 Market risk continued

### Market risk regulatory capital requirements

The CRR specifies minimum capital requirements against market risk in the trading book. Interest rate risk in the non-trading book is covered separately under the Pillar 2 framework.

The PRA has granted the Group permission to use the internal model approach (IMA) covering the majority of interest rate, foreign exchange, precious metals, base metals, energy and agriculture market risk in the trading book. Positions outside the IMA scope are assessed according to standard PRA rules.

The minimum regulatory market risk capital requirements for the trading book are presented below for the Group.

**Table 76: Market risk regulatory capital requirements**

	2019		2018	
	Risk Weighted Assets \$million	Regulatory capital requirement \$million	Risk Weighted Assets \$million	Regulatory capital requirement \$million
<b>Market risk capital requirements for trading book</b>				
Interest rate <sup>1</sup>	8,751	700	6,432	515
Equity	9	1	3	–
Options	17	1	16	1
Commodity <sup>2</sup>	20	2	129	10
Foreign exchange <sup>2</sup>	645	52	667	53
Internal Models Approach <sup>3</sup>	11,364	909	11,862	949
<b>Total</b>	<b>20,806</b>	<b>1,664</b>	<b>19,109</b>	<b>1,528</b>

1 Securitisation positions contributed \$27.5 million to the interest rate position risk requirement (PRR) and \$344 million to interest rate RWA as at 31 December 2019 (securitised positions contributed \$15.3million to the interest rate PRR and \$192 million to interest rate RWA as at 31 December 2018)

2 Commodity and foreign exchange cover non-trading book as well as trading book

3 Where the risks are not within the approved scope of the internal models approach, they are captured in the relevant category above based on the Standardised Approach

**Table 77: Market risk under standardised approach (MR1)**

	2019		2018

<b>5 Other<sup>1</sup></b>	3,352	268	3,196	256
<b>6 Total<sup>2</sup></b>	11,364	909	11,862	949

1 Other IMA capital add-ons for market risks not fully captured in either VaR or SVaR. More details on Risks not in VaR can be found in the 2019 Annual Reports and Accounts on page 192

2 There are zero IRC and CRM as the Group has not applied model permission for specific interest rate risk comprehensive risk measure

## 4.1 Market risk continued

### Backtesting

In 2019, there were five regulatory backtesting negative exceptions at Group level (in 2018, there were two regulatory backtesting negative exceptions at Group level). Group exceptions occurred on:

- 1 April: when markets rallied following the release of strong Chinese manufacturing data.
- 30 May: driven by a reduction in US Dollar yields and implied volatility which reversed an increase of the previous day.
- 10 June: when US Treasury yields rallied following reports that proposed tariffs on goods from Mexico to the USA would not be implemented.

→ 8 August: Stronger than expected Chinese renminbi fixing eased concerns over US-China trade tensions and new Chinese economic data signalled some recovery for China's export-heavy economy. US Dollar and US Treasury yields rose.

→ 19 August: US and Mexico reached agreement on illegal migration. President Trump announced suspension of proposed tariffs on Mexican goods. US Dollar yields rose.

In total there have been five Group exceptions in the previous 250 business days which is within the 'amber zone' applied internationally to internal models by bank supervisors (Basel Committee on Banking Supervision, Supervisory framework for the use of backtesting in conjunction with the internal models approach to market risk capital requirements, January 1996).

The graphs below illustrate the performance of the VaR model used in the Group capital calculations. They compare the 99 percentile loss confidence level given by the VaR model with the Hypothetical and Actual P&L of each day given the real market movements. Actual backtesting P&L excludes from trading P&L: brokerage expense, fees & commissions, non-market-related accounting valuation adjustments and accounting debit valuation adjustments. Hypothetical backtesting P&L further excludes P&L from new deals and market operations.

**Table 80: 2019 Backtesting chart for Internal Model Approach regulatory trading book at Group level with hypothetical profit and loss (P&L) versus VaR (99 per cent, one day) (MR4)**

**Table 81: 2019 Backtesting chart for Internal Model Approach regulatory trading book at Group level with actual profit and loss (P&L) versus VaR (99 per cent, one day) (MR4)**

## 4.2 Counterparty credit risk

Counterparty credit risk (CCR) is the risk that a counterparty in a foreign exchange, interest rate, commodity, equity or credit derivative or repo contract defaults prior to the maturity date of the contract, and that the Group at the time has a claim on the counterparty. CCR arises predominantly in the trading book, but also arises in the non-trading book when hedging with external counterparties is required.

CCR is managed within the overall credit risk appetite for corporate and financial institutions. CCR limits are set for individual counterparties, including central clearing counterparties, and for specific portfolios. Individual limits are calibrated to the credit grade and business model of the counterparties, and are set on Potential Future Exposure (PFE). Portfolio limits are set to contain concentration risk across multiple dimensions, and are set on PFE or other equivalent measures.

The Group reduces its credit exposures to counterparties by entering into contractual netting agreements which result in a single amount owed by or to the counterparty. The amount is calculated by netting the Mark-To-Market (MTM) owed by the counterparty to the Group and the MTM owed by the Group to the counterparty on the transactions covered by the netting agreement. In line with the International Accounting Standard (IAS) 32 principles, the Group's balance sheet will present assets and liabilities on a net basis provided there is a legally enforceable right to set off assets and liabilities, and the Group intends to settle on a net basis or realise the asset and liability simultaneously.

### Wrong-way risk

Wrong-way risk occurs when an exposure increase is coupled with a decrease in the credit quality of the obligor. Specifically, as the MTM on a derivative or repo contract increases in favour of the Group, the driver of this MTM change also reduces the ability of the counterparty to meet its payment, margin call or collateral posting requirements. Wrong-way risk mostly arises from FX transactions and financing transactions. The Group employs various policies and procedures to ensure that wrong-way risk exposures are recognised upfront, monitored, and where required, contained by limits on country, tenor, collateral type and counterparty.

### Stress testing

Stress testing is an integral part of CCR management, complementing PFE or other portfolio limits. Single and multi-factor scenarios are regularly applied to the CCR portfolio to identify and quantify exposures that could become a concern for the Group. The stressed exposures are monitored monthly at regional and global counterparty credit risk exposure forums. The relevance and severity of the stress scenarios are periodically reviewed with cross functional stakeholders.

### Exposure value calculation

Exposure calculation used for risk management is based on PFE. The PFE is mostly calculated from simulation models, and from PFE add-ons for the non-simulated products.

Derivatives exposures are calculated using the Mark-to-Market Method. Individual transactions are measured using the sum of current replacement cost and potential future credit exposure, and the benefit of master netting agreements is applied using the Net-Gross Ratio. This approach is used for all derivative products not covered by our Internal Models Method (IMM) permission. Under the IMM approach, EAD is calculated by multiplying the effective expected positive exposure by a factor stipulated by the regulator called alpha. The Group has been granted permission by the regulator to use the IMM approach for "vanilla" Interest Rate and Foreign Exchange over the counter derivatives. The alpha value set to 1.6. The IMM model is subject to model validation including regular model performance monitoring.

Exposure for repurchase transactions and securities lending or borrowing transactions is calculated using the Financial Collateral Comprehensive Method. Supervisory volatility adjustments are applied to both collateral and exposure legs and the benefit of master netting agreements is taken into consideration.

The Group has credit policies and procedures setting out the criteria for collateral to be recognised as a credit risk mitigant, including requirements concerning legal certainty, priority, concentration, correlation, liquidity and valuation parameters such as frequency of review and independence. The Group seeks to negotiate Credit Support Annexes (CSA) with counterparties when collateral is deemed a necessary or desirable mitigant to the exposure. The credit terms of a CSA are specific to each legal document and determined by the credit risk approval unit responsible for the counterparty. The nature of the collateral is specified in the legal document and is typically cash or highly liquid securities.

The MTM of all trades captured under CSAs is calculated daily. Additional collateral will be called from the counterparty if total uncollateralised MTM exposure exceeds the threshold and minimum transfer amount specified in the CSA. Additional collateral may be required from the counterparty to provide an extra buffer to the daily variation margin process.

In line with market convention, the Group negotiates CSA terms for certain counterparties where the thresholds related to each party are dependent on their ECAI long-term rating. Such clauses are typically mutual in nature. As a result, a downgrade in the Group's rating would result in some counterparties seeking additional collateral calls to cover negative MTM portfolios where thresholds are lowered. The amount of collateral that the Group would be required to provide given a one-notch credit rating downgrade is approximately \$180 million (2018: \$331 million).

The Group also has policies and procedures in place setting out the criteria for guarantees to be recognised as a credit risk mitigant. Where guarantees meet regulatory criteria, the Group treats the exposure as guarantor risk from counterparty credit risk capital standpoint.

### Credit valuation adjustments

CVA measures potential MTM loss associated with the deterioration in the creditworthiness of the counterparty. The group applies standardised approach to calculate CVA capital charge on over-the-counter derivative contracts. Details on CVA are provided in note 13 of the 2019 Annual Report and Accounts on page 296.

Table 82 shows the credit exposure on derivative transactions after taking into account the benefits from legally enforceable netting agreements and collateral held, including transactions cleared through recognised trading exchanges.

Table 83 specifies the methods used by the Group to calculate counterparty credit risk regulatory requirements, followed by Table 84 which demonstrates the risk-weighted exposure amounts to central counterparties by derivative types.

Table 85 indicates the notional amounts of credit derivative transactions segregated between protection bought and sold within each product type.

Table 86 describes the exposure value subject to credit valuation adjustment charge and related RWA.

## 4.2 Counterparty credit risk continued

→ Multilateral development banks exposures decreased by \$0.4 billion mainly due to a reduction in derivatives, primarily across ASEAN & South Asia.

## 4.2 Counterparty credit risk continued

The following tables provide further detail on the exposure classes subject to counterparty credit risk, in particular for central governments or central banks, institutions, corporates and retail. These have been split by internal credit grade which relate to the PD ranges presented.

- Central government and central bank exposures decreased by \$3.4 billion due to an increase in repo activity
- Institutions exposures reduced by \$10.7 billion and RWA by \$0.8 billion mainly due to a decrease in derivative exposures
- Corporates exposures increased by \$16.2 billion and RWA by \$1.7 billion driven by an increase in SFTs

# 5. Interest rate risk in the banking book

## Overview

The Group defines Interest Rate Risk in the Banking Book ('IRRBB') as the potential for loss of future earnings or economic value following adverse movements in interest rates, which arises from a mismatch in the re-pricing profile of assets, liabilities, and off-balance sheet items in the banking book. This risk is incorporated in the Capital and Liquidity Risk Type Framework, as a risk sub-type of Capital and Liquidity Risk.

The Board delegates the management of IRRBB to the Group Asset & Liability Committee (GALCO), which in turn mandates the Country ALCOs and the Group's Operational Balance Sheet Committee (OBSC) to monitor IRRBB as per the risk type framework.

IRRBB is managed at a country level by the Country ALCO, chaired by the Country CEO, and is independently monitored by Treasury Risk.

## Measurement of IRRBB

The Group uses two key metric types for measuring IRRBB: Net Interest Income ('NII') Sensitivity, an income measure which quantifies the potential change in projected net interest income over a one-year horizon from defined movements in interest rates; and Economic Value ('EV') Sensitivity, a value measure which estimates the potential change in the present value of the Group's Banking Book assets and liabilities from defined movements in interest rates. EV measures include PV01, which measures the

economic value sensitivity that would result from a 1 basis point instantaneous upward parallel shift in interest rates. The two types of measure differ in their coverage of the drivers of interest rate risk and the time horizon for these to materialise, but used together they can provide a complementary and rounded view of the Group's risk profile. Both NII and EV Sensitivities are monitored monthly against defined Risk Appetite limits, which are set at the Group level and, where appropriate, at a country level in compliance with local regulatory requirements. PV01 is controlled and monitored daily at country and currency level.

## Methodology

NII and EV Sensitivities are calculated under various interest rate scenarios, including parallel and non-parallel shifts and a range of internally designed scenarios that assess vulnerabilities in the Group's business model and key behavioural assumptions under interest rate shocks and stresses. Risk Appetite limits are monitored with respect to specific interest rate scenarios designed to reflect severe but plausible changes in global interest rates.

IRRBB models and methodologies are defined for the Group by the Treasury Liquidity function, independently validated and approved by a designated model approval body. Country modelling assumptions are derived locally using the Group's methodologies, and are reviewed by Treasury Risk and Country ALCO.

## Management of IRRBB

The Group uses Funds Transfer Pricing (FTP) to transfer re-pricing risk from the business to Treasury Markets, including that arising from structural positions such as the investment of equity and non-maturity deposit balances. For non-maturity deposits, the assumed duration is dependent on the portion that can be considered stable and the degree to which these balances are considered price sensitive. The re-pricing risk transferred to Treasury Markets is managed on an integrated basis with a securities portfolio maintained for liquidity and investment management purposes. Any basis risk that is not transferred and cannot be hedged by Treasury Markets is reported and overseen at local ALCOs.

Re-pricing risk arising within Treasury Markets is managed using a combination of on-balance sheet and derivative hedges; derivative hedges are subject to Fair Value and Cash Flow Hedge accounting treatment where available. Treasury Markets' interest rate risk positions and limits are independently monitored by the Traded Risk Management (TRM) function.

Table 94 below reflects Treasury Markets interest rate risk profile (at year end). The table shows that net PV01 increased year on year, especially in US Dollar and Hong Kong Dollar, as Treasury Markets managed exposures against a falling rate environment.

More details on NII sensitivity can be found in the 2019 Annual Reports and Accounts on page 204.

## 6. Liquidity risk

### Liquidity & Funding risk management

For information on the Group's Liquidity & Funding risk management practices and risk profile we refer to the Principal Risks and Risk Profile sections of the 2019 Annual Report and Accounts on pages 195 and 203 respectively.

### Liquidity Coverage Ratio (LCR) disclosure

The Liquidity Coverage Ratio (LCR) is a regulatory stress ratio measuring the proportion of High-Quality Liquid Assets (HQLA) against net outflows over 30 calendar days. An essential component of the Basel III reforms, the LCR was introduced in October 2015 with the goal of promoting the short-term resilience of a firm's liquidity risk profile.

The Group monitors and reports its LCR under European Commission Delegated Regulation 2015/61 (LCR Delegated Act rules) and is also subject to local prudential LCR requirements across our footprint, where applicable. The Prudential Regulation Authority (PRA), as the Group's competent authority, accelerated LCR implementation by setting an initial industry-wide minimum threshold of 80 per cent on 1 October 2015 before increasing to 90 per cent on 1 January 2017 ahead of full implementation (100 per cent) from 1 January 2018.

The LCR is a Pillar 1 regulatory requirement calculated by applying standardised haircuts, outflow and inflow factors to HQLA, liabilities and assets respectively. Risks not captured, or not fully captured, under the standardised Pillar 1 ratio (e.g. Intra-day risk or other risks specific to each firm) are known as Pillar 2 risks and are captured under a separate Pillar 2 regulatory framework. These Pillar 2 requirements are set in the form of fixed or variable add-ons to LCR Pillar 1 requirements. Therefore, it should be noted that the HQLA reported in the table below is held to meet Pillar 1 and Pillar 2 risks along with internal Board approved risk appetite.

### HQLA

HQLA eligible securities, as defined under LCR Delegated Act rules, fall into three categories: Level 1, Level 2A, and Level 2B liquid assets. Level 1 liquid assets, which are of the highest quality and deemed the most liquid (e.g. central bank reserves or securities issued by the U.S. Treasury Department), are subject to no or little discount (or haircuts) to their market value and may be largely used without limit in the liquidity buffer, except for Level 1 covered bonds.

Level 2A and 2B securities are recognised as being relatively stable and reliable sources of liquidity, but not to the same extent as Level 1 assets. LCR rules therefore set a 40 per cent composition cap on the combined amount of Level 2A and Level 2B that firms may hold in their total eligible liquidity buffer. Level 2B liquid assets, which are considered less liquid and more volatile than Level 2A liquid assets, are subject to large and varying haircuts and may not exceed 15 per cent of the total eligible HQLA.

To be recognised as HQLA eligible, securities must also meet various operational and general requirements designed to ensure that such assets have robust liquidity characteristics and can be freely converted into cash within a short timeframe, without significant loss in value.

### Outflows

Expected outflows are generally calculated as a percentage outflow of on-balance sheet items (e.g. funding received) and off-balance sheet commitments (e.g. credit and liquidity lines) made by firms. This outflow varies typically by counterparty. For example, the outflow expected on retail deposits is lower than the outflow expected on deposits provided by corporates or financial institutions.

### Inflows

Expected inflows are also generally calculated as a percentage inflow on-balance sheet items and include inflows (e.g. from retail or corporate loans) that will be repaid within 30 days. To ensure a minimum level of liquid asset holdings, and to prevent firms from relying solely on anticipated inflows to meet their liquidity coverage ratio, the prescribed amount of inflows that can offset outflows is capped at 75 per cent of total expected outflows.

Calculated pursuant to LCR Delegated Act rules, the following table sets forth simple averages of month-end Group LCR observations over the 12-months preceding each quarter. For a period end Group LCR disclosure, refer to page 196 of the 2019 Annual Report and Accounts.

23	Liquidity coverage ratio (%)					148%	150%	153%	156%

The ratios reported in the above table are simple averages of month-end Group LCR ratios over the twelve months preceding each quarter. Therefore, these ratios may not be equal to the implied LCR calculated when using the average component amounts reported under 'Liquidity buffer' and 'Total net cash outflows' in the above table.

### Main drivers and changes in LCR

The Group continued to maintain a strong average LCR position over the reporting period with a prudent surplus to both Board approved risk appetite and regulatory requirements.

The Group's average LCR was 144 per cent in the fourth quarter (first quarter: 156 per cent) with higher average HQLA holdings and higher cash outflows, reflecting the overall growth in the Group's balance sheet. The increase in net outflows, mainly due to reduced inflows, exceeded the growth in HQLA resulting in an overall decrease in the ratio as we looked to optimise our liquidity position.

### HQLA composition

Figures reported in this section are simple averages of the 21 data points over the reporting period April 2018 to Dec 2019.

Our average weighted HQLA over the reporting period was approximately \$150 billion. Of this amount, 90 per cent consisted of Level 1 assets in the form of unencumbered central bank reserves (average 32 per cent) and high quality level 1 securities 58 per cent). Level 1 securities were mainly composed of central bank and government assets as well as securities issued by multilateral development banks and international organisations. In addition, 8 per cent of average weighted HQLA over the period consisted of Level 2A assets (mainly third country central/regional governments and public sector entities). The remaining average weighted HQLA was made up of Asset-backed securities recognised as Level 2B under LCR rules.

The Group's combined Level 2A and Level 2B securities (10 per cent) were well below the 40 per cent composition cap for such assets as required under LCR Delegated Act rules with Level 2B securities (2 per cent) falling below the required 15 per cent of total HQLA limit.

HQLA presented herein excludes excess liquidity held at certain subsidiaries that is not transferable within the Group.

Our liquidity management function in Treasury actively manages the size and composition of our eligible HQLA to ensure it is well diversified and reflects the Group's Board approved risk appetite and supporting risk measures, regulatory and internal stress testing requirements, the currency denomination of outflows, amongst other relevant considerations.

For a regional view of our HQLA liquidity pool, refer to page 198 of the 2019 Annual Report and Accounts.

**Table 96: Total eligible high-quality liquid assets (HQLA)**

	Average unweighted	Average weighted
Level 1 reserves	32%	32%
Level 1 liquid securities	57%	58%
Level 2A liquid assets	9%	8%
Level 2B liquid assets	2%	2%

### Concentration of funding and liquidity sources

The Group's funding strategy is largely driven by its policy to maintain adequate liquidity at all times, in all geographic locations and in all currencies, and hence to be in a position to meet all obligations as they fall due.

With a sufficiently flexible funding strategy we are able to reduce liquidity risk by diversifying our liquidity resources. Our high degree of geographic diversification constitutes a material risk offset because of our ability to raise a variety of funding across a number of markets in which we operate.

The Group has established internal measures to closely monitor and highlight any build up in counterparty and tenor concentrations to ensure it can meet liquidity needs under different stress scenarios and different time horizons.

Our funding profile over the reporting period was well diversified across different sources by product, business and tenor. Consistent with the Group's funding strategy, customer assets were largely funded out of customer deposits, which are considered a stable source of funding. Customer deposits are primarily sourced from Current Account Saving Account balances along with time deposits and these are further diversified across different customer segments, currencies, tenors and markets.

For further details on the Group's funding profile, refer to pages 195 to 203 of the 2019 Annual Report and Accounts.

### Derivative exposures and potential collateral calls

In the normal course of business, the Group deals in the Over-the-counter (OTC) and exchange traded derivative markets with both collateralised and uncollateralised derivative counterparties. Trades are taken primarily to facilitate client activity or for hedging our own risk exposures; as such, derivatives are not generally held for position-taking.

The LCR Delegated Act requires HQLA to be held against net contractual and contingent outflows relating to derivative transactions. These include:

- Net Contractual outflows over a 30-day calendar period – if subject to either legally enforceable master netting agreements and/or covered by collateral agreements (e.g. CSA), these cash flows can be netted at a counterparty level
- The impact of an adverse market scenario on the collateral requirements of the Group's derivatives portfolio
- Incremental collateral required to be posted in the event of a deterioration in the Group's own credit quality (e.g. a three-notch downgrade in the firm's long-term external credit rating)

- The counterparties' contractual right to substitute higher quality collateral with lower quality collateral
- The devaluation of existing collateral posted to counterparties
- Callable/due excess collateral that a firm may be contractually required to return to a counterparty

In addition to regulatory requirements, the Group employs various measures to actively reduce the risk of potential collateral calls on our derivative positions.

On average over the reporting period, weighted 'Outflows related to derivative exposures and other collateral requirements' made up only 8 per cent of the Group's total weighted outflows.

### Currency mismatch in the LCR

The Group LCR is calculated and reported on a consolidated basis and in its reporting currency, US dollars. Although not required to meet minimum LCR requirements in other currencies, we report other significant currency LCRs to the PRA as part of the monthly LCR submission as well as to senior stakeholders in the form of internal monthly MI.

To minimise currency mismatch risk, the Group seeks to fund assets in the same currency, however, due to our global footprint, cross currency funding is utilised to appropriately manage currency gaps when it makes economic sense to do so.

To the extent mismatches arise, these are managed via the Group's currency convertibility framework. The framework identifies currencies that are expected to have limited convertibility during a stress, and sets thresholds on the amount of currency surplus that can be used to meet outflows in other currencies. HQLA amounts reported in Table 96 above therefore exclude surplus liquidity across the Group considered non-convertible in stress.

The implementation of liquidity metrics (such as ADR) at country level ensures that a large portion of assets is funded out of liabilities raised in the same currency. We also monitor closely, against set limits, the amount of foreign currency that can be swapped to local currency, and vice versa, in addition to currency mismatches by different tenor buckets.

### 6.1 Encumbered and unencumbered assets

The following disclosures of encumbered and unencumbered assets are based on the requirements in Part Eight of the CRR and the EBA RTS (EBA/RTS/2017/03).

Standard Chartered's primary funding source is its customer deposit base. The Group's advances-to-deposits ratio remained broadly unchanged from last year at 64.2 per cent (2018: 63.1 per cent). Given this structural unsecured funding position we have little requirement to fund ourselves in secured markets, and therefore our overall low level of encumbrance reflects this position. However, we do provide collateralised financing services to clients and these result in off-balance sheet encumbrance. The Group monitors the mix of secured and unsecured funding sources within the Group's funding plan and seeks to efficiently utilise available collateral to raise secured funding and meet other collateral requirements.

The median value of the Group's encumbered and unencumbered assets, as at 31 December 2019, differs from the Group's disclosures in the 2019 Annual Report and Accounts. The difference is due to the basis of calculation with the EBA Guidelines requiring disclosure of median values of 2019 monthly data. The table above compares the different values.

Table 100: Median values versus annual disclosure comparative

	Group Median Value		Group ARA value	
	2019 \$billion	2018 \$billion	2019 \$billion	2018 \$billion
Encumbered Assets	28	25	26	25
Unencumbered Assets	696	672	695	664

The Group's median asset encumbrance for 2019 was \$28 billion, which primarily related to cash collateral pledged against derivatives, Hong Kong government certificates of indebtedness which are both included within other assets, and other securities. Encumbered assets represent on-balance sheet assets pledged or subject to any form of arrangement to secure, collateralise or credit enhance any transaction from which it cannot be freely withdrawn. Debt securities are predominantly related to repurchase agreements. Furthermore, the unencumbered assets that cannot be encumbered also remain at low level and include goodwill, property and plant, unsettled trades, non-group acceptance and tax assets. Derivatives and Reverse Repos are not generally deemed available for encumbrance.

The Group provides collateralised security financing services to its clients, which is also used to manage the Group's own short-term cash and collateral needs. For securities accepted as collateral, mandates are credit rating driven with appropriate notional limits per rating, asset and individual bond concentration. The majority of collateral the Group uses in repo/reverse repo and stock lending/stock borrowing transactions is investment grade government issued. Information on over-collateralisation can be found in the Credit risk mitigation section of the 2019 Annual Report and Accounts on pages 174 to 177.

## 7. Forward-looking statements

This document may contain 'forward-looking statements' that are based on current expectations or beliefs, as well as assumptions about future events. These forward-looking statements can be identified by the fact that they do not relate only to historical or current facts. Forward-looking statements often use words such as 'may', 'could', 'will', 'expect', 'intend', 'estimate', 'anticipate', 'believe', 'plan', 'seek', 'continue' or other words of similar meaning. By their very nature, such statements are subject to known and unknown risks and uncertainties and can be affected by other factors that could cause actual results, and the Group's plans and objectives, to differ materially from those expressed or implied in the forward-looking statements. Recipients should not place reliance on, and are cautioned about relying on, any forward-looking statements.

There are several factors which could cause actual results to differ materially from those expressed or implied in forward-looking statements. The factors that could cause actual results to differ materially from those described in the forward-looking statements include (but are not limited to) changes in global, political, economic, business, competitive, market and regulatory forces or conditions, future exchange and interest rates, changes in tax rates, future business combinations or dispositions and other factors specific to the Group. Any forward-looking statement contained in this document is based on past or current trends and/or activities of the Group and should not be taken as a representation that such trends or activities will continue in the future. No statement in this document is intended to be a profit forecast or to imply that the earnings of the Group for the current year or future years will necessarily match or exceed the historical or published earnings of the Group. Each forward-looking statement speaks only as of the date of the particular statement.

Except as required by any applicable laws or regulations, the Group expressly disclaims any obligation to revise or update any forward looking statement contained within this document, regardless of whether those statements are affected as a result of new information, future events or otherwise.

Nothing in this document shall constitute, in any jurisdiction, an offer or solicitation to sell or purchase any securities or other financial instruments, nor shall it constitute a recommendation or advice in respect of any securities or other financial instruments or any other matter.

# Annex 1

## Standard Chartered Significant Subsidiaries

### Capital resources of significant subsidiaries

For local capital adequacy purposes, a range of approaches are applied in accordance with the regulatory requirements in force in each jurisdiction. Wherever possible, the approaches adopted at the Group level are applied locally.

CRR Article 13 requires the application of disclosure requirements of significant subsidiaries of EU parent institutions and those subsidiaries which are of material significance to their local market.

The capital resources of the Group's significant subsidiaries under CRR Article 13 are presented below. These subsidiaries are Standard Chartered Bank, a UK incorporated banking entity including overseas branches, and subsidiaries, Standard Chartered Bank (Hong Kong) Limited and Standard Chartered Bank Korea Limited.

The capital resources of these subsidiaries are calculated in accordance with the regulatory requirements applicable in the countries in which they are incorporated, and therefore cannot be aggregated, but are presented to align with the Group format.

Standard Chartered Bank (Singapore) Limited and Standard Chartered Bank Uganda Limited qualify as the Group's subsidiaries which are Domestically Important Institutions (D-SIs). Standard Chartered Bank Uganda Limited follows Basel I rules, see Table 101 for their information presented to align with Group format.

The table below provides a summary view of the significant subsidiaries. The significant subsidiary data is subject to change due to local timing and local regulatory requirements.

1 Standard Chartered Bank disclosed in the table above aligns with the capital section of the 2019 Standard Chartered Bank Accounts.

2 2018 Capital resources have been re-presented to align with local regulatory returns, which included late adjustments for Standard Chartered Bank (Singapore) Ltd

### Capital management – Standard Chartered Bank

The Risk management approach section of the 2019 Annual Report and Accounts sets out our approach to capital management (pages 217 to 218). Tables 102 to 110 summarise the consolidated capital position of Standard Chartered Bank, as well as a summary of exposures and credit quality.

Further disclosures of the legal entity Standard Chartered Bank may be found in the 2019 Standard Chartered Bank Accounts.

# Glossary

<b>Additional Tier 1 (AT1) capital</b>	Additional Tier 1 capital consists of instruments issued by the bank and related share premium other than Common Equity Tier 1 that meet the Capital Requirement Regulation (CRR) criteria for inclusion in Tier 1 capital.
<b>Advanced Internal Rating Based (AIRB) approach</b>	The AIRB approach under the Basel framework is used to calculate credit risk capital based on the Group's own estimates of prudential parameters.
<b>Africa &amp; Middle East (AME)</b>	Africa & Middle East (AME) includes Bahrain, Egypt, Iraq, Jordan, Lebanon, Oman, Pakistan, Qatar, Saudi Arabia and the United Arab Emirates (UAE).
<b>Arrears</b>	A debt or other financial obligation is considered to be in a state of arrears when payments are overdue. Loans and advances are considered to be delinquent when consecutive payments are missed. Also known as 'delinquency'.
<b>Available-for-Sale</b>	Non-derivative financial assets that are designated as available-for-sale or are not classified as loans and receivables; held to maturity investments, or financial assets at fair value through profit or loss.
<b>ASEAN</b>	Association of South East Asian Nations (ASEAN) which includes the Group's operation in Brunei, Indonesia, Malaysia, Philippines, Singapore, Thailand and Vietnam.
<b>ASEAN &amp; South Asia (ASA)</b>	ASEAN & South Asia (ASA) includes Australia, Bangladesh, Brunei, Cambodia, India, Indonesia, Laos, Malaysia, Myanmar, Nepal, Philippines, Singapore, Sri Lanka, Thailand and Vietnam.
<b>Asset Backed Securities (ABS)</b>	Securities that represent an interest in an underlying pool of referenced assets. The referenced pool can comprise any assets which attract a set of associated cash flows but are commonly pools of residential or commercial mortgages and in the case of Collateralised Debt Obligations (CDOs), the reference pool may be ABS.
<b>Attributable profit to ordinary shareholders</b>	Profit for the year after non-controlling interests and the declaration of dividends on preference shares classified as equity.
<b>Backtesting</b>	A statistical technique used to monitor and assess the accuracy of a model, and how that model would have performed had it been applied in the past.
<b>Basel II</b>	The capital adequacy framework issued by the Basel Committee on Banking Supervision (BCBS) in June 2006 in the form of the 'International Convergence of Capital Measurement and Capital Standards'.
<b>Basel III</b>	In December 2010, the BCBS issued the Basel III rules text, which were updated in June 2011, and represents the details of strengthened global regulatory standards on bank capital adequacy and liquidity. The new requirements have been phased in and will be fully implemented by 1 January 2019. In December 2017, the BCBS published a document setting out the finalisation of the Basel III framework. The new requirements issued in December 2017 will be implemented from 2022.
<b>Basis point (bps)</b>	One hundredth of a per cent (0.01 per cent); 100 basis points is 1 per cent. Used in quoting movements e.g. in interest rates or yields on securities.
<b>Capital conservation buffer</b>	A capital buffer prescribed by regulators under Basel III and designed to ensure banks build up capital buffers outside periods of stress which can be drawn down as losses are incurred. Should a bank's CET1 capital fall within the capital conservation buffer range, capital distributions will be constrained by the regulators.
<b>Capital Requirements Directive (CRD)</b>	A capital adequacy legislative package adopted by EU member states. CRD IV comprises the recast Capital Requirements Directive and the Capital Requirements Regulation (CRR). The package implements the Basel III framework together with transitional arrangements for some of its requirements. CRD IV came into force on 1 January 2014.
<b>Central Counterparty (CCP)</b>	A CCP is a clearing house that acts as an intermediary between counterparties for certain products that are traded in one or more financial markets.
<b>Common Equity Tier 1 (CET1) capital</b>	Common Equity Tier 1 capital consists of the common shares issued by the bank and related share premium, retained earnings, accumulated other comprehensive income and other disclosed reserves, eligible non-controlling interests and regulatory adjustments required in the calculation of Common Equity Tier 1.
<b>Common Equity Tier 1 ratio</b>	Common Equity Tier 1 capital as a percentage of risk-weighted assets.
<b>Countercyclical capital buffer (CCyB)</b>	The countercyclical capital buffer is part of a set of macroprudential instruments, designed to help counter pro-cyclicality in the financial system. CCyB as defined in the Basel III standard provides for an additional capital requirement of up to 2.5 per cent of risk-weighted assets in a given jurisdiction. The Bank of England's Financial Policy Committee has the power to set CCyB rate for the United Kingdom. Each bank must calculate its 'institution-specific' CCyB rate, defined as the weighted average of the CCyB rates in effect across the jurisdictions in which it has credit exposures. The institution-specific CCyB rate is then applied to a bank's total risk weighted assets.
<b>Counterparty credit risk (CCR)</b>	The risk that a counterparty defaults before satisfying its obligations under a derivative, a securities financing transaction (SFT) or a similar contract.
<b>CRD IV</b>	A capital adequacy legislative package adopted by EU member states. CRD IV comprises the recast Capital Requirements Directive and the Capital Requirements Regulation (CRR). The package implements the Basel III framework together with transitional arrangements for some of its requirements. CRD IV came into force on 1 January 2014. CRR II and CRD V amending the existing package came into force in June 2019 with most changes starting to apply from 28 June 2021.
<b>Credit Conversion Factor (CCF)</b>	Either prescribed by CRR or modelled by the bank, an estimate of the amount the Group expects a customer to have drawn further on a facility limit at the point of default.

<b>Credit Default Swap (CDS)</b>	A derivative contract where a buyer pays a fee to a seller in return for receiving a payment in the event of a credit event (for example bankruptcy, payment default on a reference asset or assets, or downgrades by an rating agency) on an underlying obligation.
<b>Credit quality step (CQS)</b>	Credit Quality Steps (CQS) are used to derive the risk-weight to be applied to exposures treated under the Standardised approach to credit risk.
<b>Credit risk</b>	Credit risk is the potential for loss due to the failure of a counterparty to meet its obligations to pay the Group in accordance with agreed terms.
<b>Credit risk mitigation (CRM)</b>	Credit risk mitigation is a process to mitigate potential credit losses from any given account, customer or portfolio by using a range of tools such as collateral, netting agreements, credit insurance, credit derivatives and guarantees.
<b>Credit support annex (CSA)</b>	A legal document that regulates the exchange of collateral between the parties of OTC derivative transactions.
<b>Credit Valuation Adjustment (CVA)</b>	In the context of prudential requirements, additional regulatory capital charge that covers the risk of mark-to-market losses associated with changes in the credit worthiness of counterparties to derivative transactions.
<b>Debit Valuation Adjustment (DVA)</b>	In the context of prudential requirements, adjustment required to Tier 1 capital to derecognise any unrealised fair value gains and losses associated with fair valued liabilities that are attributable to the market's perception of the Group's credit worthiness.
<b>Domestic systemically important banks (D-SIB)</b>	Domestic systemically important banks are deemed systemically relevant for the domestic financial system in which they operate. The FSB and the BCBS have developed a framework for identifying and dealing with D-SIBs. The D-SIB framework has been implemented in the EU via CRD IV which refers to D-SIBs as Other Systemically Important Institutions ('O-SIIs').
<b>Equity price risk</b>	The financial risk involved in holding equity in a particular investment. Arises from changes in the prices of equities, equity indices, equity baskets and implied volatilities on related options.
<b>Expected Loss (EL)</b>	The Group measure of anticipated loss for exposures captured under an internal ratings based credit risk approach for capital adequacy calculations. It is measured as the Group-modelled view of anticipated loss based on Probability of Default (PD), Loss Given Default (LGD) and Exposure at Default (EAD), with a one-year time horizon.
<b>Exposure</b>	Credit exposures represent the amount lent to a customer, together with any undrawn commitment.
<b>Exposure at default (EAD)</b>	The estimation of the extent to which the Group may be exposed to a customer or counterparty in the event of, and at the time of, that counterparty's default. At default, the customer may not have drawn the loan fully or may already have repaid some of the principal, so that exposure is typically less than the approved loan limit.
<b>External Credit Assessment Institutions (ECAI)</b>	For the Standardised Approach to credit risk for sovereigns, corporates and institutions, external ratings are used to assign risk-weights. These external ratings must come from credit rating agencies that are registered or certified in accordance with the credit rating agencies (CRA) regulation or from a central bank issuing credit ratings which is exempt from the application this regulation.
<b>Fair value</b>	The value of an asset or liability when it is transacted on an arm's length basis between knowledgeable and willing parties.
<b>Financial Policy Committee (FPC)</b>	The Financial Policy Committee is an independent committee at the Bank of England that has the primary objective of identifying, monitoring and taking action to remove or reduce systemic risks with a view to protecting and enhancing the resilience of the UK financial system. The FPC's secondary objective is to support the economic policy of the Government.
<b>Foreseeable dividends net of scrip</b>	Includes both ordinary and preference share dividends reasonably expected to be paid out of any future residual interim or year-end profits. In the case of ordinary dividends, the amount of foreseeable dividends deducted from the interim or year-end profits is equal to the amount of interim or year-end profits multiplied by the dividend payout ratio. In the case of preference share dividends, the amount of foreseeable dividends is equal to the amount accrued during the relevant reporting period payable at a future date.
<b>Foundation Internal Ratings Based (FIRB) Approach</b>	A method of calculating credit risk capital requirements using internal PD models but with supervisory estimates of LGD and conversion factors for the calculation of EAD.
<b>Free delivery</b>	When a bank takes receipt of a debt or equity security, a commodity or foreign exchange without making immediate payment, or where a bank delivers a debt or equity security, a commodity or foreign exchange without receiving immediate payment.
<b>Funding valuation adjustments (FVA)</b>	FVA reflects an adjustment to fair value in respect of derivative contracts associated with the funding costs that the market participant would incorporate when determining an exit price.
<b>Greater China</b>	Greater China includes the Group's operation in the People's Republic of China, the Hong Kong Special Administrative Region of the People's Republic of China and Taiwan.
<b>Greater China &amp; North Asia (GCNA)</b>	Greater China & North Asia (GCNA) includes China, Hong Kong, Japan, Korea, Macau and Taiwan.
<b>Global Systemically Important Bank (G-SIB)</b>	Global financial institutions whose size, complexity and systemic interconnectedness mean that their distress or failure would cause significant disruption to the wider financial system and economic activity. The Financial Stability Board (FSB) and the Basel Committee on Banking Supervision (BCBS) have established a methodology to identify G-SIBs based on 12 principal indicators. The list of G-SIBs is re-assessed through annual re-scoring of banks and a triennial review of the methodology. The G-SIB framework established by the FSB and the BCBS is implemented in the EU via CRD IV and G-SIBs are referred to as Global Systemically Important Institutions ('G-SIIs').
<b>G-SIB buffer</b>	A CET1 capital buffer which results from designation as a G-SIB. The G-SIB buffer is between 1 per cent and 3.5 per cent, dependent on the allocation to one of five buckets based on the annual scoring. In the EU, the G-SIB buffer is implemented via CRD IV as Global Systemically Important Institutions ('G-SII') buffer requirement.
<b>Haircut</b>	A haircut, or volatility adjustment, ensures the value of exposures and collateral are adjusted to account for the volatility caused by foreign exchange or maturity mismatches, when the currency and maturity of an exposure differ materially to the currency and maturity of the associated collateral.

<b>Held-to-maturity</b>	Held-to-maturity assets are non-derivative financial assets with fixed or determinable payments and fixed maturities that the Group's management has the intention and ability to hold to maturity.
<b>Impaired loans</b>	Loans where individually identified impairment provisions have been raised. Also includes loans which are collateralised or where indebtedness has already been written down to the expected realisable value. The impaired loan category may include loans, which, while impaired, are still performing.
<b>Individually assessed loan impairment provisions (IIP)</b>	Impairment is measured for assets that are individually significant to the Group. Typically assets within the Corporate & Institutional Banking segment of the Group are assessed individually.
<b>Individual capital guidance</b>	Guidance given by the PRA to the Group about the amount and quality of capital resources to maintain.
<b>Individual impairment charge</b>	The amount of individually assessed loan impairment provisions that are charged to the income statement in the reporting period.
<b>Individual liquidity guidance</b>	Guidance given by the PRA to the Group about the amount, quality and funding profile of liquidity resources to maintain.
<b>Institution</b>	A credit institution or an investment firm as defined under the Capital Requirement Regulation (CRR).
<b>Internal Capital Adequacy Assessment Process (ICAAP)</b>	A requirement on institutions under Pillar 2 of the Basel framework to undertake a comprehensive assessment of their risks and to determine the appropriate amounts of capital to be held against these risks.
<b>Internal Liquidity Adequacy Assessment Process (ILAAP)</b>	A requirement on institutions under Pillar 2 of the Basel framework to undertake a comprehensive assessment of their risks and to determine the appropriate amounts of liquidity to be held against these risks.
<b>Internal Model Approach (IMA)</b>	The approach used to calculate market risk capital and RWA with an internal market risk model approved by the PRA under the terms of CRD IV/CRR.
<b>Internal Model Method (IMM)</b>	One of three approaches defined in the Basel Framework to determine exposure values for counterparty credit risk.
<b>Interest Rate Risk (IRR)</b>	Interest rate risk arises due to the investment into rate-sensitive assets, as well as from mismatches between debt issuance and placements.
<b>Internal ratings-based approach ('IRB')</b>	Risk-weighting methodology in accordance with the Basel Capital Accord where capital requirements are based on a firm's own estimates of prudential parameters.
<b>Items belonging to regulatory high-risk categories</b>	In relation to the Standardised Approach to credit risk, items which attract a risk-weight of 150 per cent. This includes exposures arising from venture capital business and certain positions in collective investment schemes.
<b>Leverage ratio</b>	A ratio introduced under Basel III / CRD IV that compares Tier 1 capital to total exposures, including certain exposures held off-balance sheet as adjusted by stipulated credit conversion factors. Intended to be a simple, non-risk based backstop measure.
<b>Liquidity Coverage Ratio (LCR)</b>	The ratio of the stock of high quality liquid assets to expected net cash outflows over the following 30 days. High quality liquid assets should be unencumbered, liquid in markets during a time of stress and, ideally, be central bank eligible.
<b>Loans and advances</b>	This represents lending made under bilateral agreements with customers entered into in the normal course of business and is based on the legal form of the instrument.
<b>Loss Given Default (LGD)</b>	The percentage of an exposure that a lender expects to lose in the event of obligor default.
<b>Mark-to-market approach</b>	One of the approaches available to banks to calculate the exposure value associated with derivative transactions. The approach calculates the current replacement cost of derivative contracts, by determining the market value of the contract and considering any potential future exposure.
<b>Market risk</b>	The potential for loss of earnings or economic value due to adverse changes in financial market rates or prices.
<b>Maturity</b>	The time from the reporting date to the contractual maturity date of an exposure, capped at five years. Maturity is considered as part of the calculation of risk-weights for the Group's exposures treated under the IRB approach to credit risk.
<b>Minimum capital requirement</b>	Minimum capital required to be held for credit, market and operational risk.
<b>Model validation</b>	The process of assessing how well a model performs using a predefined set of criteria including the discriminatory power of the model, the appropriateness of the inputs, and expert opinion.
<b>MREL or minimum requirement for own fund and eligible liabilities</b>	A requirement under the Bank Recovery and Resolution Directive for EU resolution authorities to set a minimum requirement for own funds and eligible liabilities for banks, implementing the FSB's Total Loss-Absorbing Capacity (TLAC) standard. MREL is intended to ensure there is sufficient equity and specific types of liabilities to facilitate an orderly resolution that minimises any impact on financial stability and ensures the continuity of critical functions and avoids exposing taxpayers to loss.
<b>Multilateral Development Banks (MDB)</b>	An institution created by a group of countries to provide financing for the purpose of development. Under the Standardised approach to credit risk, eligible multilateral development banks attract a zero per cent risk-weight.
<b>Net stable funding ratio (NSFR)</b>	The ratio of available stable funding to required stable funding over a one year time horizon, assuming a stressed scenario. It is a longer-term liquidity measure designed to restrain the amount of wholesale borrowing and encourage stable funding over a one year time horizon.
<b>North East (NE) Asia</b>	North East (NE) Asia includes the Group's operation in the Republic of Korea and Japan.
<b>Operational risk</b>	The potential for loss arising from the failure of people, process, or technology, or the impact of external events.
<b>Over-the-Counter (OTC) traded products/OTC derivatives</b>	A bilateral transaction that is not exchange traded and is valued using valuation models.
<b>Pillar 1</b>	The first Pillar of the three pillars of Basel framework which provides the approach to the calculation of the minimum capital requirements for credit, market and operational risk. Minimum capital requirements are 8 per cent of the Group's risk-weighted assets.

<b>Pillar 2</b>	The second pillar of the three pillars of Basel framework which requires banks to undertake a comprehensive assessment of their risks and to determine the appropriate amounts of capital to be held against these risks where other suitable mitigants are not available.
<b>Pillar 3</b>	The third pillar of the three pillars of Basel framework which aims to provide a consistent and comprehensive disclosure framework that enhances comparability between banks and further promotes improvements in risk practices.
<b>Point in time (PIT)</b>	Considers the economic conditions at the point in the economic cycle at which default occurs when estimating the probability of default.
<b>Portfolio Impairment Provision (PIP)</b>	The amount of loan impairment provisions assessed on the collective portfolio that are charged to the income statement in the reporting period.
<b>Potential Future Exposure (PFE)</b>	An estimate of the potential increase in exposure that may arise on a derivative contract prior to default, used to derive the exposure amount.
<b>Probability of Default (PD)</b>	PD is an internal estimate for each borrower grade of the likelihood that an obligor will default on an obligation within 12 months.
<b>Present Value 01 (PV01)</b>	This represents the change in present value of an asset or liability for a 1 basis point change in the nominal yield curve.
<b>Prudential Regulatory Authority (PRA)</b>	The Prudential Regulation Authority is the statutory body responsible for the prudential supervision of banks, building societies, credit unions, insurers and a small number of significant investment firms in the UK. The PRA is a part of the Bank of England.
<b>Prudent Valuation Adjustment (PVA)</b>	An adjustment to CET1 capital, to reflect the difference between the accounting fair value and the regulatory prudent value of positions, where the application of prudence results in a lower absolute carrying value than recognised in the financial statements.
<b>Qualifying Central Counterparty (QCCP)</b>	Central counterparty that is either authorised (when established in the EU) or recognised (when established in a third-country) in accordance with the rules laid down in the European Market Infrastructure Regulation (EMIR).
<b>Qualifying Revolving Retail Exposure (QRRE)</b>	Retail IRB exposures that are revolving, unsecured, and, to the extent they are not drawn, immediately and unconditionally cancellable, such as credit cards.
<b>Regulatory capital</b>	Sum of Tier 1 and Tier 2 capital after regulatory adjustments.
<b>Repurchase agreement (repo) / reverse repurchase agreement (reverse repo)</b>	A short term funding agreement which allows a borrower to sell a financial asset, such as ABS or Government bonds as collateral for cash. As part of the agreement the borrower agrees to repurchase the security at some later date, usually less than 30 days, repaying the proceeds of the loan. For the party on the other end of the transaction (buying the security and agreeing to sell in the future) it is a reverse repurchase agreement or reverse repo.
<b>Residential Mortgage-Backed Securities (RMBS)</b>	Securities that represent interests in a group of residential mortgages. Investors in these securities have the right to cash received from future mortgage payments (interest and/or principal).
<b>Residual maturity</b>	The remaining maturity of a facility from the reporting date until either the contractual maturity of the facility or the effective maturity date.
<b>Retail Internal Ratings Based (Retail IRB) Approach</b>	In accordance with the PRA handbook and CRR, the approach to calculating credit risk capital requirements for eligible retail exposures.
<b>Risk Appetite</b>	Risk Appetite is defined by the Group and approved by the Board. It is the maximum amount and type of risk the Group is willing to assume in pursuit of its strategy.
<b>Risk Capacity</b>	The maximum level of risk the Group can assume, given its current capabilities and resources, before breaching constraints determined by capital and liquidity requirements and internal operational capability (including but not limited to technical infrastructure, risk management capabilities, expertise), or otherwise failing to meet the expectations of regulators and law enforcement agencies.
<b>Risk-weighted assets (RWA)</b>	A measure of a bank's assets adjusted for their associated risks, expressed as a percentage of an exposure value in accordance with the applicable Standardised or IRB approach provisions.
<b>RWA density</b>	The risk-weighted asset as a percentage of exposure at default (EAD).
<b>Scrip dividends</b>	Dividends paid to existing shareholders in securities instead of cash payment.
<b>Securities Financing Transactions (SFT)</b>	Securities Financing Transactions are secured (i.e. collateralised) transactions that involve the temporary exchange of cash against securities, or securities against other securities, e.g. stock lending or stock borrowing or the lending or borrowing of other financial instruments, a repurchase or reverse repurchase transaction, or a buy-sell back or sell-buy back transaction.
<b>Securitisation</b>	Securitisation is a process by which credit exposures are aggregated into a pool, which is used to back new securities. Under traditional securitisation transactions, assets are sold to a special purpose entity (SPE) who then issues new securities to investors at different level of seniority (credit tranching). This allows the credit quality of the assets to be separated from the credit rating of the originating institution and transfers risk to external investors in a way that meets their risk appetite. Under synthetic securitisation transactions, the transfer of risk is achieved by the use of credit derivatives or guarantees, and the exposures being securitized remain exposures of the originating institution.
<b>Securitisation position(s)</b>	The positions assumed by the Group following the purchase of securities issued by Asset-Backed Securitisation programmes or those retained following the origination of a securitisation programme.
<b>Specialised lending</b>	Specialised lending exposures are defined as an exposure to an entity which was created specifically to finance and/or operate physical assets, where the contractual arrangements given the lender a substantial degree of control over the assets and the income that they generate and the primary source of repayment of the obligation is the income generated by the assets being financed, rather than the independent capacity of a broader commercial enterprise.

<b>Special Purpose Entities (SPEs)</b>	SPEs are entities that are created to accomplish a narrow and well defined objective. There are often specific restrictions or limits around their ongoing activities. Transactions with SPEs take a number of forms, including: the provision of financing to fund asset purchases, or commitments to provide financing for future purchases; derivative transactions to provide investors in the SPE with a specified exposure; the provision of liquidity or backstop facilities which may be drawn upon if the SPE experiences future funding difficulties; and direct investment in the notes or equity issued by SPEs.
<b>Standardised Approach (SA)</b>	In relation to credit risk, a method for calculating credit risk capital requirements using External Credit Assessment Institutions (ECAI) ratings and supervisory risk-weights. In relation to operational risk, a method of calculating the operational risk capital requirement by the application of a supervisory defined percentage charge to the gross income of eight specified business lines.
<b>Stressed Value at Risk (SVAR)</b>	A regulatory market risk measure based on potential market movements for a continuous one-year period of stress for a trading portfolio.
<b>Through the cycle (TTC)</b>	Reduces the volatility in the estimation of the probability of default by considering the average conditions over the economic cycle at the point of default, versus the point in time (PIT) approach, which considers economic conditions at the point of the economic cycle at which default occurs.
<b>Tier 1 capital</b>	Tier 1 capital comprises Common Equity Tier 1 capital plus Additional Tier 1 securities and related share premium accounts.
<b>Tier 1 capital ratio</b>	Tier 1 capital as a percentage of risk-weighted assets.
<b>Tier 2 capital</b>	Tier 2 capital comprises qualifying subordinated liabilities and related share premium accounts.
<b>Total Loss Absorbing Capacity (TLAC)</b>	An international standard for TLAC issued by the FSB, which requires G-SIBs to have sufficient loss-absorbing and recapitalisation capacity available in resolution, to minimise impacts on financial stability, maintain the continuity of critical functions and avoid exposing public funds to loss.
<b>Total Return Swap (TRS)</b>	A derivative transaction that swaps the total return on a financial instrument, including cash flows and capital gains or losses, for an interest rate return.
<b>Trading book</b>	The trading book consists of all positions in CRD financial instrument and commodities which are fair valued through the profit and loss account for accounting purposes, which are held either with trading intent or in order to hedge other elements of the trading book and which are either free of any restrictive covenants on their tradability or ability to be hedged.
<b>Value at Risk (VAR)</b>	A quantitative measure of market risk estimating the potential loss that will not be exceeded in a set time period at a set statistical confidence level.
<b>Write downs</b>	After an advance has been identified as impaired and is subject to an impairment allowance, the stage may be reached whereby it is concluded that there is no realistic prospect of further recovery. Write downs will occur when and to the extent that, the whole or part of a debt is considered irrecoverable.
<b>Wrong way risk</b>	Wrong way risk occurs when an exposure increase is coupled with a decrease in the credit quality of the obligor.

# Prudential disclosure reference

CRR article ref.	Requirement summary		Disclosure
Scope of disclosure requirement			
431	(1)	Mandate for institutions to publicly disclose information laid down in Article 432.	The Group publishes Pillar 3 disclosures
	(2)	Institutions to disclose operational risk information in accordance with the applicable approaches.	The Group applies the standardised approach, RWAs and capital requirements for operational risk are shown in Table 20: (OV1) on page 21 and in the 2019 Annual Reports and Accounts on page 239.
	(3)	Institutions must have formal policy in place to comply with the prudential disclosure requirements.	The Group has a dedicated policy governing prudential disclosure requirements in place.
	(4)	Explanation of ratings decisions to SMEs and corporates when asked.	The Group provides ratings decisions to SMEs and corporates upon request.
Non-material, proprietary or confidential information			
432	(1)	Information may be omitted from disclosure if not regarded material.	Items omitted from disclosure are listed in section 1.3. Regulatory disclosure - Framework on page 3.
	(2)	Information may be omitted from disclosure if regarded proprietary or confidential.	See Article 432(1) above.
	(3)	Disclosure must contain a list of omitted information with reasons clearly stated.	See Article 432(1) above.
	(4)	All material, non-confidential and non-proprietary information must be disclosed.	All material, non-confidential and non-proprietary information is disclosed by the Group in its 2018 Pillar 3 and 2019 Annual Report and Accounts.
Frequency of disclosure			
433		Disclosures in accordance with the rules laid down must be made at least annually in conjunction with the financial statements.  Institutions should consider the need to publish information with increased frequency on own funds, risk exposures and items prone to rapid change.	Section 1.3 Regulatory disclosure - Framework sub-section on Frequency on page 3.
		EBA mandate to publish guidelines on the application of more frequent disclosures.	EBA/GL/2014/14 published on 23 December 2014 EBA/GL/2016/11 published on 14 December 2016
Means of disclosure			
434	(1)	Institutions may determine the appropriate medium, location and means of verification to comply with the disclosure requirements.	Section 1.3 Regulatory disclosure - Framework, sub-section on Verification on page 3.  The 2018 Pillar 3 document is made publicly available on the Group website with the 2018 Annual Report and Accounts and other public disclosures.
	(2)	Equivalent disclosures made by institutions under accounting, listings or other requirements may be deemed compliant with Pillar 3.	The Group discharges parts of the prudential disclosure requirements in the 2018 Annual Reports and Accounts, in Main Features and GSIB disclosures, with cross references to exact locations provided in its Pillar 3 document.
Risk management objectives and policies			
435 (1)	(1)(a)	Description of risk management objectives and policies for each risk category, including strategies and process to manage those risks.	Section 1.4 Risk management on page 4.  Risk management approach section in the 2018 Annual Report and Accounts on pages 1 to 3.
	(1)(b)	The structure and organisation of the risk management functions.	See Article 435 (1)(a) above
	(1)(c)	The scope and nature of risk reporting and measurement systems.	See Article 435 (1)(a) above
	(1)(d)	Policies for hedging and mitigating risk, strategies for monitoring the effectiveness of these risk mitigants.	See Article 435 (1)(a) above
	(1)(e)	Declaration approved by management body on the adequacy of risk management arrangements.	See Article 435 (1)(a) above
	(1)(f)	Risk statement approved by the management body including key ratios and figures to demonstrate a comprehensive view of the institution.	Key ratios and figures are highlighted in section 1.2 on pages 1 to 3 and in the 2019 Annual Report and Accounts on page 236.
	(2)(a)	The disclosure must contain information on the number of directorship held.	2019 Annual Reports and Accounts, Board of Directors, on page 69 to 71.

CRR article ref.	Requirement summary	Disclosure
(2)(b)	The recruitment policy for the members of management body.	2019 Annual Reports and Accounts, Board of Directors, on pages 69 to 71 and Governance and Nomination Committee on pages 101 to 104.
(2)(c)	Policy on diversity for members of the management body.	2019 Annual Reports and Accounts, Governance and Nomination Committee, on pages 101 to 104. Further information published on the Group website <a href="https://sc.com/boarddiversitypolicy">sc.com/boarddiversitypolicy</a> .
(2)(d)	Whether the institution has a separate risk committee and the number of times they meet.	2019 Annual Reports and Accounts, Corporate Governance, on pages 92 to 97.
(2)(e)	Description of information flow on risk to the management body.	2019 Annual Reports and Accounts, Risk management, on pages 92 to 97.
<b>Scope of application</b>		
436	(a) Disclosure to contain the name of the institution.	Name of the Group and the Group logo are displayed on the cover page of the disclosures.
	(b)(i) Clarify the differences between the basis of consolidation for accounting and prudential purposes with short explanation of entities and whether they are fully consolidated,	Table 3: Regulatory Consolidation on page 5. Table 4: Outline of the differences in the scope of consolidation (LI3) on page 6.
	(b)(ii) proportionally consolidated,	See Article 436(b)(i) above.
	(b)(iii) deducted from own funds,	See Article 436(b)(i) above.
	(b)(iv) Neither consolidated nor deducted.	See Article 436(b)(i) above.
	(c) Explain any current or foreseen impediments to transfer of own funds to between parent and subsidiaries.	Note 32 of the 2019 Annual Report and Accounts on page 352.
	(d) The amount of capital deficiency in subsidiaries not included in the consolidation.	Entities not included in the scope of prudential consolidation are appropriately capitalised.
	(e) Making use of articles on derogations from a) prudential requirements or b) liquidity requirements for individual subsidiaries/entities.	The Group makes use of the individual consolidation method according to a waiver provided by the PRA.
<b>Own funds</b>		
437	(1)(a) Reconciliation of CET1, AT1, T2, filters and deductions to financial accounts.	Table 8. Reconciliation between financial total equity and regulatory CET1 before regulatory adjustments on page 11.
	(1)(b) Main features of the CET1, AT1 and T2 instruments issued by the institution.	Section 2.2. Capital resources on page 11.
	(1)(c) Full terms and conditions of CET1, AT1 and T2 capital instruments.	See Article 437(1)(b) above.
	(1)(d)(i) The nature and amounts of each prudential filter.	Table 9 Composition of regulatory capital (CC1) on pages 11 to 12.
	(1)(d)(ii) The nature and amounts of each deduction made.	Table 9 Composition of regulatory capital (CC1) on pages 11 to 12.
	(1)(d)(iii) The nature and amounts of non-deducted items.	Table 9 Composition of regulatory capital (CC1) on pages 11 to 12.
	(1)(e) Description of restrictions applied to the calculation of own funds.	There were no restrictions applied to the calculation of own funds .
	(1)(f) Description of own funds calculation based on alternative methods.	The Group follows own funds calculation set out in the CRR, in the format set out by the below implementing regulation.
	(2) EBA mandate to develop common disclosure templates.	Implementing Regulation (EU) No 1423/2013.
<b>Capital requirements</b>		
438	(a) Summary of approach to assessing capital adequacy.	Section 2.1 Capital management on page 11. Capital planning on page 217 of the 2019 Annual Reports and Accounts
	(b) On demand, the results of capital adequacy assessment.	There was no specific demand for the Group from the PRA. Following industry practice the Group's Pillar 2A results are disclosed in section 2.2 Capital resources on page 11.
	(c) 8% risk weight to be assigned to exposures under the standardised approach for each asset class.	Table 20: Overview of RWA (OV1) on page 21. Table 22: RWA flow statements of credit risk exposures under IRB (CR8) on page 23.
	(d)(i) 8% risk weight to be assigned to exposures under the IRB approach for each asset class, including all categories of retail and equity exposures.	Table 20: Overview of RWA (OV1) on page 21. Table 22: RWA flow statements of credit risk exposures under IRB (CR8) on page 23
	(d)(ii) 8% risk weight to be assigned to exposures under the IRB approach for exchange traded, private equity and other exposures.	Table 20: Overview of RWA (OV1) on page 21.
	(d)(iii) 8% risk weight to be assigned to exposures under the IRB approach for exposures subject to supervisory transition.	The Group has no exposures subject to supervisory transition

CRR article ref.	Requirement summary	Disclosure
(d)(iv)	8% risk weight to be assigned to exposures under the IRB approach for exposures subject to grandfathering provisions.	The Group has no exposure subject to grandfathering provisions.
(e)	Disclosure of own funds requirements.	Section 2.5 Capital requirements on pages 21 to 24.
(f)	Disclosure of own funds requirements calculated for operational risk by approaches used.	Table 20: Overview of RWA (OV1) on page 21.
<b>Exposure to counterparty credit risk</b>		
439 (a)	Methodology used to assign internal capital and credit limits for counterparty credit risk.	Section 4.2. Counterparty credit risk on page 83.
(b)	Discussion of policies for securing collateral and establishing credit reserves.	Section 4.2. Counterparty credit risk on page 83.
(c)	Discussion of policies on wrong-way risk exposures.	Section 4.2. Counterparty credit risk on page 83.
(d)	The amount of collateral that would need to be provided in the event of downgrade.	Section 4.2. Counterparty credit risk on page 83.
(e)	FV of contracts, netting benefits, netted current credit exposure, collateral held and net derivatives credit exposure.	Table 82: Impact of netting and collateral held on exposure values (CCR5-A) on page 84.
(f)	Exposure values under the mark to market, original exposure, standardised or internal model methods as applicable.	Table 83: Analysis of CCR exposures by approach (CCR1) on page 84.
(g)	The notional value of credit derivative hedges and CRM by types of exposure.	Table 85: Credit derivatives exposures (CCR6) on page 85.
(h)	The notional amount of credit derivatives by own portfolio and intermediation activities, by products and by bought and sold.	Table 85: Credit derivatives exposures (CCR6) on page 85.
(i)	Estimate of alpha.	Table 83: Analysis of CCR exposures by approach (CCR1) on page 84.
<b>Capital buffers</b>		
440 (1)(a)	Amount of credit exposures used in the calculation of countercyclical capital buffer by geography.	Table 18: Geographical distribution of credit exposures relevant for the calculation of the countercyclical capital buffer on page 19.
(1)(b)	The amount of institution specific countercyclical capital buffer.	Table 19: Amount of institution specific countercyclical capital buffer on page 20.
(2)	EBA mandate to develop implementing technical standards specifying disclosure requirements.	Commission Delegated Regulation (EU) 2015/1555 published on 28 May 2015.
<b>Indicators of global systemic importance</b>		
441 (1)	Institutions identified as G-SIIs to disclose the values of indicators on an annual basis.	Discussed in Section 1.3. Regulatory disclosure framework on page 3.
(2)	EBA mandate to draft ITS for reporting.	Commission Implementing Regulation (EU) 2016/818
<b>Credit risk adjustments</b>		
442 (a)	Accounting definition of past due and impaired.	Glossary sections of Pillar 3 and the Annual Report and Accounts on pages 119 to 123 and 411 to 416 respectively. Credit risk section of the 2019 Annual Report and Accounts on page 153.
(b)	Approaches and methods used for determining specific and general credit risk adjustments.	Section 3.4. Exposure values on page 37. Note 8 of the 2019 Annual Report and Account on pages 274 to 278
(c)	Exposure and average exposure after accounting offsets and pre credit risk mitigations by asset classes.	Table 40: Total and average exposure at default (CRB-B) on page 38.
(d)	Exposure by significant geographies and material exposures classes.	Table 41: Exposure at default by geography (CRB-C) on page 39.
(e)	Exposures by industry and by exposure classes.	Table 42: Exposure at default by industry (CRB-D) on page 41.
(f)	Exposures by residual maturity and by exposure class.	Table 43: Exposure at default by maturity (CRB-E) on page 43.
(g)(i)	By industry or counterparty type the amount of impaired and past due exposures.	Table 44: Credit quality of exposures by exposure class and instrument (CR1-A) on page 45. Table 45: Credit quality of exposures by industry (CR1-B) on page 47.
(g)(ii)	By industry or counterparty type the amount of specific and general credit risk adjustments.	See Article 442(g)(i) above.
(g)(iii)	By industry or counterparty type the amount of specific and general credit risk charges for the period.	See Article 442(g)(i) above.

CRR article ref.	Requirement summary	Disclosure
(h)	Impaired and past due exposures by geography.	Table 46: Credit quality of exposures by geography (CR1-C) on page 48. Table 47: Credit quality of performing and non-performing exposures by past due days on page 48.
(i)(i)	Reconciliation of changes in specific and general credit risk adjustments for impaired exposures by type of credit risk adjustments.	Table 48: Credit quality of forbore exposures on page 50. Table 49: Performing and non-performing exposures and related provisions on page 50. Table 50: Changes in the stock of general and specific credit risk adjustments (CR2-A) on page 52. Table 51: Changes in the stock of defaulted and impaired loans and debt securities (CR2-B) on page 52.
(i)(ii)	Opening balances for reconciliation of changes in specific and general credit risk adjustments.	See Article 442(i)(i) above.
(i)(iii)	Credit risk adjustments during the period.	See Article 442(i)(i) above.
(i)(iv)	The amount reserved for probable losses during the period and any other adjustments.	See Article 442(i)(i) above.
(i)(v)	Closing balance of the reconciliation for changes in specific and general credit risk adjustments.	See Article 442(i)(i) above.
<b>Unencumbered assets</b>		
443	EBA mandate to issue guidelines for disclosure of unencumbered assets.	EBA/GL/2014/03 issued in December 2014
<b>Use of ECAIs</b>		
444	(a) The names of ECAIs used for the calculation of RWA under the standardised approach.	Section 3.8. standardised risk weight profile on page 68.
	(b) The exposure classes for which the ECAIs are used for the standardised approach.	Section 3.8. standardised risk weight profile on page 68.
	(c) Description of the process used to transfer issuer and issue credit assessment onto banking book exposures.	Section 3.8. standardised risk weight profile on page 68.
	(d) The relation between ECAIs and regulatory credit quality steps used within the standardised approach.	Section 3.8. standardised risk weight profile on page 68.
	(e) The exposure values before and after credit risk mitigation for each credit quality step under the standardised approach.	Table 68: Standardised approach – exposures by asset classes and risk weights (pre CRM pre CCF) (CR5) on page 69. Table 69: Standardised approach – exposures by asset classes and risk weights (post CRM post CCF) (CR5) on page 70. Table 87: Standardised approach – CCR exposures by regulatory portfolio and risk (CCR3) on page 86.
<b>Exposure to market risk</b>		
445	The amount of market risk requirements calculated for the purposes of own funds requirements for position, FX, commodities risks and for specific interest rate risk of securitisation positions.	Table 20: (OV1) provides RWA and capital requirements for each risk category defined on page 21. Table 76: Market risk regulatory capital requirements on page 80.
<b>Operational risk</b>		
446	Description of approaches used for the calculation of own funds requirements.	The Group applies STD approach for measuring capital requirements, described in section 1.4. Risk management under Operational Risk on page 4.
<b>Exposures in equities not included in the trading book</b>		
447	(a) Differentiation of exposures based on their objects, and an overview of accounting and valuation methodologies used.	Disclosure is excluded on the bases of materiality
	(b) The balance sheet and fair value of equities in the banking book and comparison of market price for exchange traded equities.	Disclosure is excluded on the bases of materiality
	(c) Description and value of exchange traded exposures.	Disclosure is excluded on the bases of materiality
	(d) The cumulative realised gains and losses on the sales and liquidations in the period.	Disclosure is excluded on the bases of materiality
	(e) Total unrealised gains and losses include in CET1 capital.	Disclosure is excluded on the bases of materiality
<b>Exposure to interest rate risk on positions not included in the trading book</b>		
448	(a) Description of the nature interest rate risk, key assumptions and frequency of measurement.	Section 5 on Interest rate risk in the banking book on pages 93.
	(b) Measure of upward and downward rate shocks by currency.	Table 94: Treasury Markets PV01 by currency on page 93.

CRR article ref.	Requirement summary	Disclosure
<b>Exposure to securitisation position</b>		
449	(a) Description of the institution's objectives in relation to securitisation activity	Section 3.9 Securitisation on page 71.
	(b) The nature of other risks including liquidity risk inherent in securitised assets	Section 3.9 Securitisation on page 71.
	(c) Description of underlying exposures	Section 3.9 Securitisation on page 71.
	(d) The roles played by the institution in the securitisation process	Section 3.9 Securitisation on page 71.
	(e) The extent of the institution's involvement in the roles referred in (d)	Section 3.9 Securitisation on page 71.
	(f) The monitoring of credit and market risk from securitisation exposures	Section 3.9 Securitisation on page 71.
	(g) The use of hedging and unfunded protection to mitigate the risks of retained securitisation exposures	Section 3.9 Securitisation on page 71.
	(h) The approaches to calculating securitisation risk-weighted assets	Section 3.9 Securitisation on page 71.
	(i) The types of SSPE that the institution, as sponsor, uses to securitise third-party exposures	Section 3.9 Securitisation on page 72 including Table 71 that lists securitization programs where the Group acts as originator.
	(j)(i) A summary of the institution's accounting policies for securitisation activities, including whether the transactions are treated as sales financing	Section 3.9 Securitisation on page 72.
	(j)(ii) Gains on sales	Not applicable. The Group originates synthetic transactions where the underlying assets remain on the Group's balance sheet, therefore the issue of gain on sales does not arise.
	(j)(iii) Securitisation valuation methodologies	Section 3.9 Securitisation on pages 71 to 73.
	(j)(iv) Accounting treatment of synthetic securitisations	Section 3.9 Securitisation on pages 71 to 73.
	(j)(v) Valuation and regulatory classification of assets awaiting securitisation	The securitised assets are originated by the Group in its ordinary course of business. Assets awaiting securitisation are not specifically identified for reporting purposes and are not subject to a specific accounting and prudential policies.
	(j)(vi) Recognition of liabilities for arrangements that could require the institution to provide financial support for securitised assets	Section 3.9 Securitisation on pages 71 to 73.
	(k) The use of ECAs for securitisations exposures	Section 3.9 Securitisation on pages 71 to 73.
	(l) Where applicable, a description of the Internal Assessment Approach	Not applicable. The Group does not originate or sponsor asset-backed commercial paper programs (ABCP)
	(m) An explanation of significant changes to the quantitative disclosures in points (n) to (q) since the last reporting period	Explanations of key movements are provided throughout
	(n)(i) Separately for the trading and the non-trading book and by exposure type: The total amount of outstanding exposures securitised by the institution	Table 72. Securitisation positions by risk-weight category under the previous securitisation framework on page 75. Table 73. Securitisation positions by risk-weight category under the new EU securitisation framework on page 76.
	(n)(ii) Retained securitisation exposures	Table 72. Securitisation positions by risk-weight category under the previous securitisation framework on page 75. Table 73. Securitisation positions by risk-weight category under the new EU securitisation framework on page 76.
	(n)(iii) Assets awaiting securitisation	See Article 449(j)(v)
	(n)(iv) For securitised facilities subject to the early amortisation treatment, drawn exposures attributed to the originator's and investors' interests respectively, the aggregate capital requirements incurred by the institution against the originator's interest and the capital requirements incurred by the institution against the investor's shares of drawn balances and undrawn lines	Table 71. Securitisation programmes (as originator) on page 74.
	(n)(v) Securitisation positions that are deducted from own funds or risk-weighted at 1250%	Table 72. Securitisation positions by risk-weight category under the previous securitisation framework on page 75. Table 73. Securitisation positions by risk-weight category under the new EU securitisation framework on page 76.
	(n)(vi) The securitisation activity of the current period, including the amount of exposures securitised and recognised gain or loss on sale	Table 70. Securitisation: ABS purchased or retained on page 72 Table 72. Securitisation positions by risk-weight category under the previous securitisation framework on page 75. Table 73. Securitisation positions by risk-weight category under the new EU securitisation framework on page 76.

CRR article ref.	Requirement summary	Disclosure
(o)(i)	Securitisation positions retained or purchased and the associated capital requirements	Table 72. Securitisation positions by risk-weight category under the previous securitisation framework on page 75. Table 73. Securitisation positions by risk-weight category under the new EU securitisation framework on page 76.
(o)(ii)	Re-securitisation exposures retained or purchased	Not applicable, the Group does not invest in re-securitisation exposures.
(p)	For the non-trading book and regarding exposures securitised by the institution, impaired/past due assets securitised and the losses recognised by the institution during the current period	Section 3.9 Securitisation sub section Capital Structuring & Distribution Group Securitisation on pages 72 to 73.
(q)	For the trading book, outstanding exposures securitised by the institution and subject to a capital requirement for market risk	There are no trading book exposures originated by the Group.
(r)	Whether the institution provided implicit support (Article 248(1)) and the impact on own funds	The Group does not provide implicit support within the terms of Article 248(1).
<b>Remuneration policy</b>		
450	(1)(a) Information on the decision-making process used for determining remuneration policy and the number of meetings held during the year by the main body overseeing remuneration.	2019 Annual Reports and Accounts on pages 108 to 137.
	(1)(b) Explanation of links between pay and performance.	2019 Annual Reports and Accounts on pages 111 to 115.
	(1)(c) Key design characteristics of the remuneration system.	2019 Annual Reports and Accounts on page 116.
	(1)(d) The ratios between fixed and variable remuneration.	2019 Annual Reports and Accounts on page 117.
	(1)(e) Information on the performance criteria for entitlement to shares, options and variable remuneration entitlements.	2019 Annual Reports and Accounts on pages 109 to 129.
	(1)(f) Description of main parameters and rationale for variable components and other non-cash benefits.	2019 Annual Reports and Accounts on pages 115 to 116.
	(1)(g) Quantitative information on remuneration by business areas.	2019 Annual Reports and Accounts on page 136.
	(1)(h)(i) Amounts of fixed and variable compensation for senior management and staff of significant influence and the number of beneficiaries for the year.	2019 Annual Reports and Accounts on pages 134 to 137.
	(1)(h)(ii) The amount of variable compensation broken down by remuneration types.	See Article 450 (1)(h)(i) above.
	(1)(h)(iii) Amounts of outstanding deferred remuneration.	See Article 450 (1)(h)(i) above.
	(1)(h)(iv) The amounts of deferred remuneration during the year.	See Article 450 (1)(h)(i) above.
	(1)(h)(v) Amount of sign-on and severance payment made during the year and the number of beneficiaries.	See Article 450 (1)(h)(i) above.
	(1)(h)(vi) The amount of severance payments awarded during the year and the number of beneficiaries.	See Article 450 (1)(h)(i) above.
	(1)(i) The number of individuals receiving remuneration over EUR1 million in a financial year by pay bands.	2019 Annual Reports and Accounts on page 136.
	(1)(j) On request from the regulator the total remuneration of the management body.	Upon demand, not disclosed publicly.
	(2) Quantitative information to be made available at the level of members of the management body for institutions that are significant in size.	2019 Annual Reports and Accounts on pages 108 to 137.
<b>Leverage</b>		
451	(1)(a) Calculation of leverage ratio and application of transitional arrangements.	Table 25: UK and CRR Leverage Ratio on page 24. Table 27: Leverage ratio common disclosure on page 25.
	(1)(b) Breakdown and reconciliation of total exposure measure to published financial statements.	Table 26: Summary of reconciliation of accounting assets and leverage exposure on page 25. Table 28: Leverage ratio: Split-up of on-balance sheet exposures on page 26.
	(1)(c) The amount of de-recognised fiduciary items.	The Group has no fiduciary items.
	(1)(d) Description of the processes used to manage excessive leverage.	Section 2.6 Leverage Ratio on page 24.
	(1)(e) Description of factors impacting leverage ratio during the period.	Section 2.6 Leverage ratio on page 24.
	(2) EBA mandate to issue ITS on common disclosure	Implementing Standard (EU)_ 2016/200 in 2016.
<b>Use of the IRB Approach to credit risk</b>		
452	(a) Details of permission for the use of IRB approach received from authority	Section 3.3 Internal Ratings Based models on pages 27 to 28.

CRR article ref.	Requirement summary	Disclosure
(b)(i)	Explanation and view of the structure of internal ratings and relation to external ratings	Table 55: Internal default grade probabilities and mapping to external ratings on page 57.
(b)(ii)	Explanation of the use of internal estimates other than those used for capital requirements calculation under the IRB approach	Section 3.6. Risk grade profile on page 53.
(b)(iii)	The process of managing and recognising credit risk mitigation	Section 3.7. Credit risk mitigation on page 66.
(b)(iv)	The control mechanisms for rating systems	Section 3.3. Internal Ratings Based models on pages 27 to 28.
(c)(i)	Description for internal ratings process for central governments and central banks	Section 3.3. Internal Ratings Based models on page 27.
(c)(ii)	Description for internal ratings process for institutions	See Article 452(c)(i).
(c)(iii)	Description for internal ratings process for corporates, including SMEs, specialised lending and purchased corporate receivables	See Article 452(c)(i).
(c)(iv)	Description for internal ratings process for retail, including SMEs, exposures secured by immovable property and qualifying revolving exposures	See Article 452(c)(i).
(c)(v)	Description for internal ratings process for equities	The standardised approach is used for equities.
(d)	The exposure values for each of the exposure classes defined under IRB approach	Table 54: IRB – Credit risk exposures by exposure class on page 55.
(e)(i)	For central governments and central banks, institutions, corporates and equity by obligor grades the total exposure amounts,	Table 56: IRB credit exposure by internal PD grade for Central governments or central banks (CR6) on page 58. Table 57: IRB credit exposure by internal PD grade for Institutions (CR6) on page 59. Table 58: IRB credit exposure by internal PD grade for Corporates (CR6) on page 60. Table 59: IRB credit exposure by internal PD grade for Corporates Specialised Lending (CR6) on page 61. Table 60: IRB credit risk exposure by internal PD grade for Corporates SME (CR6) on page 62.
(e)(ii)	The exposure weighted average risk weight	See Article 452 (e)(i)
(e)(iii)	For institutions using own estimates of CCF, the RWA, the amount of undrawn commitments, and exposure-weighted average exposure values	See Article 452(e)(i)
(f)	For retail exposures either the disclosure of 452(e) or analysis of exposures against EL grades	Table 61: IRB credit exposure by internal PD grade for Retail (CR6) on page 63. Table 62: IRB credit exposure by internal PD grade for Retail - SME (CR6) on page 64. Table 63: IRB credit exposure by internal PD grade for Retail - Secured by real estate collateral (CR6) on page 65. Table 64: IRB credit exposure by internal PD grade for Retail - Qualifying revolving (CR6) on page 66.
(g)	The actual specific credit risk adjustments compared to past experience by asset classes	Table 52: Regulatory expected loss on page 53.
(h)	Description of factors that impacted on loss experience	Section 3.5. Regulatory expected loss vs. impairment charge on page 53.
(i)	Analysis of estimates against actual outcomes for losses by asset classes over a period sufficient enough to assess the performance of the IRB models	Table 29: CIB model results on page 29. Table 30: Retail model results on page 29.
(j)(i)	The exposure-weighted average LGD and PD in percentage for each exposure class by geography	Table 53: Exposure weighted average PD% and LGD% by geography on page 54.
(j)(ii)	For institutions that do not use own estimates of LGD, the weighted-average PD in percentage for each exposure class by geography	Table 53: Exposure weighted average PD% and LGD% by geography on page 54.
<b>Use of credit risk mitigation techniques</b>		
453	(a) Description of policies and processes for the use of on- and off-balance sheet netting.	Section 3.7. Credit risk mitigation on page 66.
	(b) Description of policies and processes for collateral valuation and management.	See 453(a) above
	(c) Description of the main types of collaterals taken by institutions.	See 453(a) above
	(d) Description of the main type of guarantor credit derivative counterparty and their credit worthiness.	See 453(a) above
	(e) Information on the market or credit risk concentrations within credit risk mitigation.	See 453(a) above

CRR article ref.	Requirement summary	Disclosure
(f)	Total exposure value by eligible financial and other eligible collateral for each asset class under the Standardised or IRB approaches, but not providing own estimates of LGD or conversation factors.	Table 66: Effect of guarantees and collateral on page 67.
(g)	Total exposure value covered by guarantees or credit derivatives by all asset classes under the Standardised or IRB approaches.	See 453(f) above.
<b>Use of the Advanced Measurement Approaches to operational risk</b>		
454	Description of risk transfer mechanisms for mitigating operational risk measured under the advanced measurement approach.	The Group does not hold a permission to use the advanced measurement approach for operational risk.
<b>Use of Internal Market Risk Models</b>		
455	(a)(i) Explanation of characteristics of the models used by sub-portfolio.	Section 4.1, under the headings Regulatory VaR and Regulatory VaR vs. Management VaR on page 77. The Group does not have CRM, IMA and IRC approvals. The related disclosure requirements are not applicable.
	(a)(ii) Description of the methodologies used and the risks measured through the use of internal models	The Group does not have IMA approval for incremental default and migration risk for correlation trading.
	(a)(iii) Description of stress testing applied by sub-portfolio	Section 4.1 under the heading Stressed VaR on page 78.
	(a)(iv) Description of the approaches used for backtesting and valuating the accuracy of internal models	Section 4.1 under the heading Backtesting on pages 78.
	(b) The scope of permission received	Section 4.1 under the heading Regulatory VaR and Regulatory VaR vs. management VaR on pages 77.
	(c) Description of methodologies adopted for and the extent of compliance with the definitions of trading book and requirements of prudent valuation in CRR Article 104 and 105	Section 4.1 under the heading Trading book and Valuation framework on pages 77.
	(d)(i) The highest, lowest and the mean of daily VaR over the reporting period at period end	Table 78 (MR3) in row VaR (10 day 99%) on page 81.
	(d)(ii) The highest, lowest and the mean of the stressed VaR over the reporting period at period end	Table 78 (MR3) in row Stressed VaR (10 day 99%) on page 81.
	(d)(iii) The highest, lowest and the mean of the risk numbers of correlation trading over the reporting period at period end	Table 78 (MR3) in row incremental risk capital charge (99.9%) on page 81. The Group does not have IMA approval for incremental default and migration risk for correlation trading, therefore, the rows of incremental risk capital charge and comprehensive risk capital charge are reported as zero.
	(e) Elements of own funds requirements when using internal models	Table 79 (MR2-A) on page 81 provides the required breakdown.
	(f) The weighted average liquidity horizon covered by internal models for incremental default, migration and correlation risks	The Group has no model permissions for specific rate and comprehensive risk measure.
	(g) Comparison of the daily end of day VaR to the value by the end of next business day	Backtesting overshooting are shown in tables 80 and 81 (MR4) on page 82.

# Summary of differences

## Summary of differences between Pillar 3 Disclosures and the Risk and capital review section of the Annual Report and Accounts

The Group's Pillar 3 Disclosures for 31 December 2018 provide details from a regulatory perspective on certain aspects of credit risk, market risk and operational risk. The quantitative disclosures in the Pillar 3 Disclosures will not, however, be directly comparable to those in the Risk and capital review section of the Annual Report and Accounts as they are largely based on internally modelled risk metrics such as PD, LGD and EAD under Basel framework, whereas the quantitative disclosures in the Risk review are based on IFRS. EAD differs from the IFRS exposure primarily due to the inclusion of undrawn credit lines and off-balance sheet commitments. In addition, a number of the credit risk disclosures within the Pillar 3 Disclosures are only provided for the internal ratings based portfolio.

Topic	Annual Report and Accounts	Pillar 3 Disclosures
<b>Basis of requirements</b>	<ul style="list-style-type: none"> <li>→ The Group's Annual Report and Accounts are prepared in accordance with the requirements of IFRS as endorsed by the EU, the UK Companies Act 2006, and the UK, Hong Kong and India Listing rules</li> </ul>	<ul style="list-style-type: none"> <li>→ The Group's Pillar 3 Disclosures, provides details on risk from a regulatory perspective to fulfil Basel III / CRD IV rule requirements which have been implemented in UK by the Prudential Regulatory Authority (PRA) via EU legislation, Capital Requirements Regulation (CRR), Part Eight</li> </ul>
<b>Basis of preparation</b>	<ul style="list-style-type: none"> <li>→ The quantitative credit risk disclosures in the Risk review are based on IFRS</li> <li>→ Loans and advances are analysed between the four client segments of Corporate &amp; Institutional, Commercial, Private and Retail Banking (split by industry classification codes)</li> <li>→ Market risk disclosures are presented using VaR methodology for the trading and non-trading books</li> </ul>	<ul style="list-style-type: none"> <li>→ Provides details from a regulatory perspective on certain aspects of credit risk, market risk and operational risk. For credit risk this is largely based on internally modelled risk metrics such as PD, LGD and EAD under Basel rules</li> <li>→ Loans and advances are analysed between those that are Internal ratings based (IRB) and standardised, split by standard CRR categories</li> <li>→ Market risk and operational risk disclosures are based on the capital required</li> </ul>
<b>Coverage</b>	<ul style="list-style-type: none"> <li>→ All external assets which have an exposure to credit risk</li> <li>→ Market risk exposure is the trading and non-trading books</li> <li>→ Liquidity risk analysis of contractual maturities, liquid assets and encumbered assets</li> </ul>	<ul style="list-style-type: none"> <li>→ The credit risk disclosures are provided for approved portfolios as per the IRB approach and remaining portfolios are assessed as per Standardised rules as prescribed in the CRR</li> <li>→ The PRA has granted the Group permission to use the internal model approach (IMA) covering the majority of market risk in the trading book. Positions outside the IMA scope are assessed according to standard CRR rules</li> <li>→ The Standardised Approach consistent with the CRR requirements is used to assess its regulatory operational risk capital requirement</li> </ul>
<b>Credit rating and measurement</b>	<ul style="list-style-type: none"> <li>→ Overview of credit risk management credit grading and the use of IRB models is on pages 212 to 214</li> <li>→ Maximum exposure to credit risk set out on page 155</li> <li>→ Internal credit grading analysis provided by business segment for both performing and non-performing loans and advances on page 159</li> <li>→ External credit grading analysis for unimpaired debt securities and treasury bills is set out on page 161</li> </ul>	<ul style="list-style-type: none"> <li>→ Details of IRB and Standardised approach to credit risk is set out on pages 27 to 28</li> <li>→ For the IRB portfolio, page 57 provides an indicative mapping of the Group's credit grades in relation to Standard &amp; Poor's credit ratings</li> <li>→ Minimum regulatory capital requirements for credit risk on page 21</li> <li>→ Credit grade analysis provided for the IRB portfolio only. EAD within the IRB portfolio after CRM, Undrawn commitments, exposure weighted average LGD and weighted average risk-weight internal credit grade on pages 58 to 66 and 88 to 92</li> <li>→ Credit quality step analysis for Standardised portfolio is provided on pages 68 to 70</li> </ul>

Topic	Annual Report and Accounts	Pillar 3 Disclosures
<b>Credit risk mitigation</b>	<ul style="list-style-type: none"> <li>→ CRM approach is set out on page 174</li> <li>→ Overview of collateral held and other credit risk mitigants provided on page 174. Quantitative overview of other risk mitigants including:</li> <li>→ Securitisations, where the Group transfers the rights to collect principal and interest on client loan assets to third parties</li> <li>→ Master netting agreements, CSAs and cash collateral for derivatives</li> </ul>	<ul style="list-style-type: none"> <li>→ Provides details on CRM from a regulatory perspective by providing EAD after CRM by IRB exposure class. Explanation is given on what constitutes eligible collateral including explanations of funded and unfunded protection. The main type of collateral for the Group's Standardised portfolio is also disclosed. Please refer to pages 66 to 68</li> <li>→ Extensive disclosures on securitisation including notional and carrying amounts, details of securitisation programmes where the Group is an originator, the accounting and governance of securitisation activities and retained exposures and carrying value by risk weight band and by geography. Please refer to pages 71 to 76</li> <li>→ EAD for items subject to CCR risk pre and post credit mitigation is disclosed. The products that are covered under CCR include 'repo style' transactions and derivative transactions. Please refer to pages 83 to 91</li> </ul>
<b>Loan portfolio</b>	<ul style="list-style-type: none"> <li>→ Group overview of the loan portfolio provided by business and by region is on page 181. Maturity analysis provided on page 178</li> </ul>	<ul style="list-style-type: none"> <li>→ EAD by region, split between IRB and Standardised portfolios page 39 and by industry types on page 41</li> <li>→ Maturity of EAD, split by IRB and Standardised on page 43</li> </ul>
<b>Problem credit management and provisioning</b>	<ul style="list-style-type: none"> <li>→ Provisioning approach set out on page 153 and definition of non-performing loans on page 414</li> <li>→ Disclosure of loans neither past due nor impaired, loans past due but not impaired, individually impaired loans and portfolio impairment charge by region can be found on page 156</li> <li>→ Disclosures on non-performing loans can be found on page 169 to 173</li> </ul>	<ul style="list-style-type: none"> <li>→ Disclosures around the expected loss model used for regulatory purposes and a tabular disclosure showing the regulatory expected loss against the net individual impairment charge. Please refer to page 53</li> </ul>
<b>Market risk</b>	<ul style="list-style-type: none"> <li>→ Details of the VaR methodology, and VAR (trading and non trading) is disclosed by risk type on pages 191 to 192</li> <li>→ Details on Group Treasury's market risk, including a table showing a parallel shift in the yield curves, on page 204</li> </ul>	<ul style="list-style-type: none"> <li>→ Provides details of the internal model approvals, such as the CAD2 granted by the PRA and the extension of the CAD2 scope to include coal market risk</li> <li>→ Market risk capital requirements for the trading book disclosed by risk type on page 80</li> </ul>
