

New 3D Secure Feature with One-Time Password for More Secure and Convenient Online Shopping Experience

Starting from 9 December 2016, you can shop online more safely with the 3D Secure One-Time Password (OTP) which will protect your online credit card transactions. The 3D Secure OTP will send a one-time password (for single use) via SMS to your mobile number registered on the bank's system each time you perform an online transaction at a 3D Secure-equipped merchant. This feature protects you from risk of cybercrime.
