## **Liquidity Risk Management**

The Liquidity Coverage Ratio ('LCR') is a regulatory requirement set to ensure that the Bank has sufficient unencumbered high-quality liquid assets ('HQLA') to meet its liquidity needs in a 30 calendar day liquidity stress scenario.

The Bank monitors and reports its liquidity position as per the Bank of Mauritius Guideline on Liquidity Risk Management and has maintained its liquidity position above the prudential requirement.

The consolidated LCR was 121% as at 31 March 2025 against the regulatory limit of 100%. The Bank continues to maintain a strong average LCR position over the reporting period with a prudent surplus over the bank internal trigger and regulatory requirements.

### **High-quality liquid assets (HQLA)**

High-quality liquid assets should be unencumbered, liquid in markets during a time of stress.

HQLA eligible securities fall into three categories: Level 1, Level 2A, and Level 2B liquid assets.

Level 1 liquid assets, which are of the highest quality and deemed the most liquid, are subject to no or little discount (or haircuts) to their market value and may be largely used without limit in the liquidity buffer.

Level 2A and 2B securities are recognized as being relatively stable and reliable sources of liquidity, but not to the same extent as Level 1 assets. LCR rules therefore set a 40% cap on the combined amount of Level 2A and Level 2B that firms may hold in their total eligible liquidity buffer.

Level 2B liquid assets are considered less liquid and more volatile than Level 2A liquid assets and are subject to larger and varying haircuts and which may not exceed 15% of the total eligible HQLA.

The bank's HQLA as at end of March 2025 amounted to USD 346m, composed of Central Bank reserves of USD 21m (HQLA1), investment in United States Government securities of USD 229m (HQLA 1) and Multilateral Development Banks securities of USD 60m. The bank also invested USD 42m in Indian Government securities which qualifies as HQLA2 and are weighted at 85% of market value (USD 36m).

The daily simple averages of the HQLA held over the first quarter of 2025 was USD 1,180m.

### **Outflows**

Expected outflows are generally calculated as a percentage outflow on-balance sheet items such as funding received and off-balance sheet commitments.

### **Inflows**

Expected inflows are also generally calculated as a percentage inflow on-balance sheet items and include inflows that will be repaid within 30 days. To ensure a minimum level of liquid asset holdings, and to prevent banks from relying solely on anticipated inflows to meet their liquidity coverage ratio, the prescribed amount of inflows that can offset outflows is capped at 75 per cent of total expected outflows.

### **Main drivers and changes in LCR**

The simple average of the Bank's bimonthly LCR over the first quarter of 2025 increased to 214% compared to 182% for the fourth quarter of 2024.

Though lower levels of HQLAs were kept on average, total cash inflows for the first quarter of 2025 increased by 38% compared to the fourth quarter of 2024 and hence driving the increase in average LCR.

The bank continues to closely monitor the LCR daily to ensure that it operates at an adequate and optimum level of HQLA.

### **Concentration of funding and liquidity sources**

The bank's funding strategy is largely driven by its policy to maintain adequate liquidity at all times and in all currencies, and hence to be in a position to meet all obligations as they fall due. The main funding sources for the bank are current account deposits from financial institutions, custody business and international corporates.

Our funding profile over the reporting period was well diversified. Customer assets were largely funded out of customer deposits, which are considered a stable source of funding and also from group borrowings. Customer deposits are primarily sourced from current accounts out of which a large portion is considered as operational accounts.

The concentration is closely monitored and the bank has put in place key metrics to ensure that there is no undue concentration on specific clients or group.

### **Derivative exposures and potential collateral calls**

The Bank deals in the several derivatives instruments and exclusively with group and on an uncollateralized basis.

Trades are taken primarily to facilitate client activity or for hedging our own risk exposures; as such, derivatives are not generally held for position-taking.

The bank runs a low derivative exposure with negligible impact on liquidity.

### **Currency mismatch in the LCR**

The Bank LCR is calculated and reported in US dollars and MUR and in other currencies if they meet the materiality threshold as set in the Bank of Mauritius Guideline.

To minimize currency mismatch risk, the Bank funds assets in the same currency. The implementation of liquidity metrics such as advance to deposit ratio ensures that a large portion of assets is funded out of liabilities raised in the same currency. We also monitor closely, against set limits, the amount of foreign currency that can be swapped to local currency, and vice versa, in addition to currency mismatches by different tenor buckets.

For the period under review, the Bank has no material currency mismatch.

## Liquidity risk Management

The Bank manages liquidity risk both on a short-term and medium-term basis. In the short-term, the focus is on ensuring that the cash flow demands can be met through asset maturities, customer deposits and wholesale funding where required. In the medium-term, the focus is on ensuring that the statement of financial position remains structurally sound.

Daily liquidity management is performed by Treasury markets with support and oversight by group treasury. Assets and Liabilities Committee ("ALCO") is responsible for ensuring that the Bank is self-sufficient and is able to meet all its obligations to make payments as they fall due by operating within the set liquidity limits. It also has primary responsibility for compliance with regulations and Bank policy and maintaining a liquidity crisis contingency plan.

The Bank liquidity risk management framework requires limits to be set for prudent liquidity management. These limits are on:

- the mismatch in local and foreign currency behavioral cash flows;
- the level of wholesale borrowing to ensure that the size of this funding is proportional to the local market and the Bank's operations;
- commitments, both on and off the statement of financial position, to ensure there are sufficient funds available in the event of drawdown on these commitments;
- the advances to deposits ratio to ensure that commercial advances are funded by stable sources;
- the amount of medium term funding to support the asset portfolio; and the amount of local currency funding sourced from foreign currency sources.
