<b>5. Total Derivatives Exposure (Sum of Item 1 to 4)</b>		4350000000000000000	<b>374,941,557,463.19</b>	<b>5,395,632,191.46</b>		<b>7,132,433,482.70</b>	<b>12,528,065,674.16</b>

<sup>1/</sup> For credit derivatives where the bank acts as a guarantor (i.e., written credit derivatives), amount should be based on effective rather than apparent notional amounts. The effective notional amount is obtained by adjusting the notional amount to reflect the true exposure of contracts that are leveraged or otherwise enhanced by the structure of the transaction.

<sup>2/</sup> No potential future credit exposure shall be calculated for single currency floating/floating interest rate swaps, the credit exposure on these contracts would be evaluated solely on the basis of their mark-to-market valuation.

<sup>3/</sup> For credit derivatives where the bank acts as the guarantor (i.e., written credit derivatives), total exposure is equal to the sum of the effective notional amount (a) and replacement cost (b). The Exposure Measure of a written credit derivative may be overstated by the inclusion in the Exposure Measure of both (1) PFE representing counterparty credit exposure and (2) effective notional amount representing reference entity exposure. To avoid double counting, a PFE of zero is assigned to a written credit derivative whose effective notional amount is already included in the Exposure Measure.

<sup>4/</sup> For contracts with multiple exchanges of principal, the factors are to be multiplied by the number of remaining payments in the contract. For contracts that are structured to settle outstanding exposure following specified payment dates and where the terms are reset such that the market value of the contract is zero on these specified dates, the residual maturity would be set equal to the time until the next reset date, and in the case of interest rate contracts with remaining maturities of more than one (1) year that meet these criteria, the potential future CCF is subject to a floor of 0.5%.

<sup>5/</sup> For single-name credit derivatives, a 5.0 percent add-on factor for the computation of the potential future credit exposure shall be used by both protection buyers and protection sellers if the reference obligation is issued by a public sector entity (PSE) or a multilateral development bank (MDB) or has an external credit rating of at least BBB- or its equivalent. A 10.0 percent add-on factor applies to all other reference obligations. However, a protection seller in a CDS shall only be subject to the add-on factor if it is subject to closeout upon the insolvency of the protection buyer while the underlying is still solvent. The add-on in this case should be capped to the amount of unpaid premiums.

With regard to multiple name derivatives, where the credit derivative is a first to default transaction, the add-on will be determined by the lowest credit quality underlying in the basket (i.e., if there are any non-investment grade or unrated items in the basket), the 10.0 percent add-on should be used. For second and subsequent nth-to-default transactions, underlying assets should continue to be allocated according to the credit quality (i.e., the second lowest credit quality will determine the add-on for a second or nth-to-default transaction respectively). On the other hand, where the credit derivative is referenced proportionately to multiple obligations, the add-on factor will follow the add-on factor applicable for the obligation with the biggest share. If the protection is equally proportioned, the highest add-on factor should be used.

Where the credit derivative is referenced proportionately to multiple obligations, the add-on factor will follow the add-on factor applicable for the obligation with the biggest share. If the protection is equally proportioned, the highest add-on factor should be used.

<sup>6/</sup> This refers to written credit derivatives. If applicable, the effective notional amount of a written credit derivative may be reduced by any negative change in fair value amount that has been incorporated into the calculation of Tier 1 capital with respect to the written credit derivative. The resulting amount may be further reduced by the effective notional amount of a purchased credit derivative on the same reference name, provided: the credit protection purchased on a reference obligation which ranks pari passu with or is junior to the underlying reference obligation of the written credit derivative in the case of single name credit derivatives; and the remaining maturity of the credit protection purchased is equal to or greater than the remaining maturity of the written credit derivative.

i. Securities Lending	195402001005000000			0.00
ii. Securities Borrowing	195402001010000000			0.00
<b>2. Total Securities Financing Transaction (SFT) exposures (Sum of a to b)</b>	195402000000000000	14,199,870,289.52	0.00	14,199,870,289.52

<sup>1/</sup> For SFT assets subject to novation and cleared through qualifying central counterparties (QCCP), "gross SFT assets recognised for accounting purposes" are replaced by the final contractual exposure, given that pre-existing contracts have been replaced by new legal obligations through the novation process. As defined in BIS paper entitled *Capital requirements for bank exposures to central counterparties* (July 2012), a QCCP is an entity that is licensed to operate as a CCP (including a license granted by way of confirming an exemption), and is permitted by the appropriate regulator/overseer to operate as such with respect to the products offered. This is subject to the provision that the CCP is based and prudentially supervised in a jurisdiction where the relevant regulator/overseer has established, and publicly indicated that it applies to the CCP on an ongoing basis, domestic rules and regulations that are consistent with the CPSS-IOSCO Principles for Financial Market Infrastructures.

<sup>2/</sup> The current exposure for transactions with a counterparty must be calculated on a transaction by transaction basis: that is, each transaction is treated as its own netting set (i.e., computed as cash payables less cash receivables of each transaction but must not be less than zero).
