<sup>1/</sup> For credit derivatives where the bank acts as a guarantor (i.e., written credit derivatives), amount should be based on effective rather than apparent notional amounts. The effective notional amount is obtained by adjusting the notional

<sup>2/</sup> No potential future credit exposure shall be calculated for single currency floating/floating interest rate swaps, the credit exposure on these contracts would be evaluated solely on the basis of their mark-to-market valuation.

<sup>3/</sup> For credit derivatives where the bank acts as the guarantor (i.e., written credit derivatives), total exposure is equal to the sum of the effective notional amount (a) and replacement cost (b). The Exposure Measure of a written credit

<sup>4/</sup> For contracts with multiple exchanges of principal, the factors are to be multiplied by the number of remaining payments in the contract. For contracts that are structured to settle outstanding exposure following specified payment dates and

<sup>5/</sup> For single-name credit derivatives, a 5.0 percent add-on factor for the computation of the potential future credit exposure shall be used by both protection buyers and protection sellers if the reference obligation is issued by a public sector. With regard to multiple name derivatives, where the credit derivative is a first to default transaction, the add-on will be determined by the lowest credit quality underlying in the basket (i.e., if there are any non-investment grade or unrated. Where the credit derivative is referenced proportionately to multiple obligations, the add-on factor will follow the add-on factor applicable for the obligation with the biggest share. If the protection is equally proportioned, the highest add-on

<sup>6/</sup> This refers to written credit derivatives. If applicable, the effective notional amount of a written credit derivative may be reduced by any negative change in fair value amount that has been incorporated into the calculation of Tier 1 capital
